Zavatarelli, Hans Renette, 2025-06-27 William Norwood Potter never played chess outside London yet is a key figure in the development of 19th century chess His play was surprisingly modern while his writings are still a model of style sense and competence John Wisker was an amateur chess player who achieved excellent results among the few professionals of his time He was recognized as the first British chess champion and had a prolific journalistic career He spent the last seven years of his life in Australia where he played an important role in a blossoming chess culture This book besides retrieving lost particulars of their lives contains all their known games and many passages of their prose Evolutionary Dynamics Martin A. Nowak, 2006-09-29 At a time of unprecedented expansion in the life sciences evolution is the one theory that transcends all

of biology Any observation of a living system must ultimately be interpreted in the context of its evolution Evolutionary change is the consequence of mutation and natural selection which are two concepts that can be described by mathematical equations Evolutionary Dynamics is concerned with these equations of life In this book Martin A Nowak draws on the languages of biology and mathematics to outline the mathematical principles according to which life evolves His work introduces readers to the powerful yet simple laws that govern the evolution of living systems no matter how complicated they might seem Evolution has become a mathematical theory Nowak suggests and any idea of an evolutionary process or mechanism should be studied in the context of the mathematical equations of evolutionary dynamics His book presents a range of analytical tools that can be used to this end fitness landscapes mutation matrices genomic sequence space random drift quasispecies replicators the Prisoner's Dilemma games in finite and infinite populations evolutionary graph theory games on grids evolutionary kaleidoscopes fractals and spatial chaos Nowak then shows how evolutionary dynamics applies to critical real world problems including the progression of viral diseases such as AIDS the virulence of infectious agents the unpredictable mutations that lead to cancer the evolution of altruism and even the evolution of human language His book makes a clear and compelling case for understanding every living system and everything that arises as a consequence of living systems in terms of evolutionary dynamics
