Internet of Things and Big Data Analytics Toward Next-Generation Intelligence Nilanjan Dey,Aboul Ella Hassanien,Chintan Bhatt,Amira S. Ashour,Suresh Chandra Satapathy,2017-08-14 This book highlights state of the art research on big data and the Internet of Things IoT along with related areas to ensure efficient and Internet compatible IoT systems It not only discusses big data security and privacy challenges but also energy efficient approaches to improving virtual machine placement in cloud computing environments Big data and the Internet of Things IoT are ultimately two sides of the same coin yet extracting analyzing and managing IoT data poses a serious challenge Accordingly proper analytics infrastructures platforms should be used to analyze IoT data Information technology IT allows people to upload retrieve store and collect information which ultimately forms big data The use of big data analytics has grown tremendously in just the past few years At the same time the IoT has entered the public consciousness sparking people s imaginations as to what a fully connected world can offer Further the book discusses the analysis of real time big data to derive actionable intelligence in enterprise applications in several domains such as in industry and agriculture It explores possible automated solutions in daily life including structures for smart cities and automated home systems based on IoT technology as well as health care systems that manage large amounts of data big data to improve clinical decisions The book addresses the security and privacy of the IoT and big data technologies while also revealing the impact of IoT technologies on several scenarios in smart cities design Intended as a comprehensive introduction it offers in depth analysis and provides scientists engineers and professionals the latest techniques frameworks and strategies used in IoT and big data technologies

Introduction to Industrial Internet of Things and Industry 4.0 Sudip Misra,Chandana Roy,Anandarup Mukherjee,2021-01-07 Industrial IoT IIoT and Industry 4 0 are newly developing and fast emerging domains of interest

among students researchers and professionals in academia and industry Due to the popular demand of this topic Introduction to Industrial Internet of Things and Industry 4 0 is written to serve a diverse readership from the domains of computer science and engineering mechanical engineering information technology industrial engineering electronics engineering and other related branches of engineering Based on the lead author s massive open online courses MOOCs this book can be used as a textbook on the emerging paradigm of Industry 4 0 and IIoT as well as a reference for professionals working in sectors of IIoT The book covers the significant aspects of IIoT in detail including sensors actuators data transmission and data acquisition which form the core of IIoT Topics and concepts are presented in a comprehensive manner so that readers can develop expertise and knowledge The book helps beginners to gain a basic idea of Industry 4 0 and IIoT as the first section is an overview of IIoT applications infrastructure based protocols cloud computing and fog computing The second section is designed to impart a basic knowledge of Industry 4 0 and IIoT as well as of the different phases of development in industry Delving into more advanced areas other sections in the book cover The business models and reference architecture of IIoT The technological aspects of Industry 4 0 and IIoT Predictive and prescriptive analytics applied in IIoT based implementations Applications and case studies of IIoT Key enabling technologies of IIoT To aid students and professional master IIoT and Industry 4 0 the book includes conceptual questions exercises and learning objectives

Data Analytics for the Social Sciences G. David Garson,2021-11-29 Data Analytics for the Social Sciences is an introductory graduate level treatment of data analytics for social science It features applications in the R language arguably the fastest growing and leading statistical tool for researchers The book starts with an ethics chapter on the uses and potential abuses of data analytics Chapters 2 and 3 show how to implement a broad range of statistical procedures in R Chapters 4 and 5 deal with regression and classification trees and with random forests Chapter 6 deals with machine learning models and the caret package which makes available to the researcher hundreds of models Chapter 7 deals with neural network analysis and Chapter 8 deals with network analysis and visualization of network data A final chapter treats text analysis including web scraping comparative word frequency tables word clouds word maps sentiment analysis topic analysis and more All empirical chapters have two Quick Start exercises designed to allow quick immersion in chapter topics followed by In Depth coverage Data are available for all examples and runnable R code is provided in a Command Summary An appendix provides an extended tutorial on R and RStudio Almost 30 online supplements provide information for the complete book books within the book on a variety of topics such as agent based modeling Rather than focusing on equations derivations and proofs this book emphasizes hands on obtaining of output for various social science models and how to interpret the output It is suitable for all advanced level undergraduate and graduate students learning statistical data analysis

Materials Data Science Stefan Sandfeld,2024-05-08 This text covers all of the data science machine learning and deep learning topics relevant to materials science and engineering accompanied by numerous examples and applications Almost all methods and algorithms introduced are implemented from scratch using

Python and NumPy The book starts with an introduction to statistics and probabilities explaining important concepts such as random variables and probability distributions Bayes theorem and correlations sampling techniques and exploratory data analysis and puts them in the context of materials science and engineering Therefore it serves as a valuable primer for both undergraduate and graduate students as well as a review for research scientists and practicing engineers The second part provides an in depth introduction of statistical machine learning It begins with outlining fundamental concepts and proceeds to explore a variety of supervised learning techniques for regression and classification including advanced methods such as kernel regression and support vector machines The section on unsupervised learning emphasizes principal component analysis and also covers manifold learning t SNE and UMAP and clustering techniques Additionally feature engineering feature importance and cross validation are introduced The final part on neural networks and deep learning aims to promote an understanding of these methods and dispel misconceptions that they are a black box The complexity gradually increases until fully connected networks can be implemented Advanced techniques and network architectures including GANs are implemented from scratch using Python and NumPy which facilitates a comprehensive understanding of all the details and enables the user to conduct their own experiments in Deep Learning
