Domain Decomposition Methods in Science and Engineering XXVI Susanne C. Brenner, Eric Chung, Axel Klawonn, Felix Kwok, Jinchao Xu, Jun Zou, 2023-03-15 These are the proceedings of the 26th International Conference on Domain Decomposition Methods in Science and Engineering which was hosted by the Chinese University of Hong Kong and held online in December 2020 Domain decomposition methods are iterative methods for solving the often very large systems of equations that arise when engineering problems are discretized frequently using finite elements or other modern techniques. These methods are specifically designed to make effective use of massively parallel high performance computing systems. The book presents both theoretical and computational advances in this domain reflecting the state of art in 2020 **Finite and Boundary Element Tearing and Interconnecting Solvers for Multiscale Problems** Clemens Pechstein, 2012-12-14

Tearing and interconnecting methods such as FETI, FETI-DP, BETI, etc. are among the most successful domain decomposition solvers for partial differential equations. The purpose of this book is to give a detailed and self-contained presentation of these methods including the corresponding algorithms as well as a rigorous convergence theory. In particular, two issues are addressed that have not been covered in any monograph yet: the coupling of finite and boundary elements within the tearing and interconnecting framework including exterior problems and the case of highly varying multiscale coefficients not resolved by the subdomain partitioning. In this context, the book offers a detailed view to an active and up-to-date area of research.

Numerical Analysis of Multiscale Problems Ivan G. Graham, Thomas Y. Hou, Omar Lakkis, Robert Scheichl, 2012-01-05 The 91st London Mathematical Society Durham Symposium took place from July 5th to 15th 2010 with more than 100 international participants attending. The Symposium focused on Numerical Analysis of Multiscale Problems and this book contains 10 invited articles from some of the meeting's key speakers covering a range of topics of contemporary interest in this area. Articles cover the analysis of forward and inverse PDE problems in heterogeneous media, high frequency wave propagation, atomistic-continuum modeling and high dimensional problems arising in modeling uncertainty. Novel upscaling and preconditioning techniques as well as applications to turbulent multi-phase flow and to problems of current interest in materials science are all addressed. As such, this book presents the current state of the art in the numerical analysis of multiscale problems and will be of interest to both practitioners and mathematicians working in those fields.

Domain Decomposition Methods in Science and Engineering XXVII Zdeněk Dostál,Tomás Kozubek,Axel Klawonn,Ulrich Langer,Luca F. Pavarino,Jakub Sístek,Olof B. Widlund,2025-01-24 These are the proceedings of the 27th International Conference on Domain Decomposition Methods in Science and Engineering which was held in Prague Czech Republic in July 2022 Domain decomposition methods are iterative methods for solving the often very large systems of equations that arise when engineering problems are discretized frequently using finite elements or other modern techniques These methods are specifically designed to make effective use of massively parallel high performance computing systems The book presents both theoretical and computational advances in this domain reflecting the state of art in 2022 **Domain Decomposition Methods in Science and Engineering XXV** Ronald Haynes,Scott MacLachlan,Xiao-Chuan Cai,Laurence Halpern,Hyea Hyun Kim,Axel Klawonn,Olof Widlund,2020-10-24 These are the proceedings of the 25th International Conference on Domain Decomposition Methods in Science and Engineering which was held in St John s Newfoundland Canada in July 2018 Domain decomposition methods are iterative methods for solving the often very large systems of equations that arise when engineering problems are discretized frequently using finite elements or other modern techniques

These methods are specifically designed to make effective use of massively parallel high performance computing systems The book presents both theoretical and computational advances in this domain reflecting the state of art in 2018 **Modern Solvers for Helmholtz Problems** Domenico Lahaye,Jok Tang,Kees Vuik,2017-03-02 This edited volume offers a state of the art overview of fast and robust solvers for the Helmholtz equation The book consists of three parts new developments and analysis in Helmholtz solvers practical methods and implementations of Helmholtz solvers and industrial applications The Helmholtz equation appears in a wide range of science and engineering disciplines in which wave propagation is modeled Examples are seismic inversion ultrasone medical imaging sonar detection of submarines waves in harbours and many more The partial differential equation looks simple but is hard to solve In order to approximate the solution of the problem numerical methods are needed First a discretization is done Various methods can be used high order Finite Difference Method Finite Element Method Discontinuous Galerkin Method and Boundary Element Method The resulting linear system is large where the size of the problem increases with increasing frequency Due to higher frequencies the seismic images need to be more detailed and therefore lead to numerical problems of a larger scale To solve these three dimensional problems fast and robust iterative solvers are required However for standard iterative methods the number of iterations to solve the system becomes too large For these reason a number of new methods are developed to overcome this hurdle The book is meant for researchers both from academia and industry and graduate students A prerequisite is knowledge on partial differential equations and numerical linear algebra

Parallel Adaptive PDE Computations Nikos Chrisochoides, 1995 Abstract We present a multithreaded model for the dynamic load balancing of numerical adaptive computations required for the solution of Partial Differential Equations PDEs on multiprocessors Multithreading is used as a means of exploring concurrency at the processor level in order to tolerate synchronization costs inherent to traditional non threaded parallel adaptive PDE solvers Our preliminary analysis for parallel adaptive PDE solvers indicates that multithreading can be used as a mechanism to mask overheads required for the dynamic balancing of processor workloads with computations required for the actual numerical solution of the PDEs Also multithreading can simplify the implementation of dynamic load balancing algorithms a task that is very difficult for traditional data parallel adaptive PDE computations Unfortunately multithreading does not always simplify program complexity often makes code re usability difficult and increases software complexity
