McKnight, Leland S. Cogan, Pamela M. Jakwerth, Richard T. Houang, 2007-05-08 *Facing the Consequences* presents a perspective on US mathematics and science education that is developed from data gathered as part of the Third International Mathematics and Science Study TIMSS TIMSS is the most extensive and far reaching cross national comparative study of mathematics and science education ever attempted It includes comparing official curricula textbooks teacher practices and student achievements for many countries from 20 to 50 countries depending on the particular comparison Thousands of official documents and textbooks were analyzed Thousands of teachers principals and other experts responded to survey questionnaires A sample of mathematics teachers in three countries had their lessons videotaped Hundreds of thousands of children in almost 50 countries were tested in mathematics and science This report presents a closer look at US mathematics and science education through careful examination of TIMSS data The authors believe this investigation shows how deceptive many often unquestioned assumptions about American education can be Drawing upon many new analyses not previously reported and integrating these with previous analyses of TIMSS data the authors develop and illustrate the argument that what happens to American students is the consequence of American beliefs that shape educational practice and the accretion of a myriad educational choices made in mathematics and science education **Standards for Our**

Schools Marc S. Tucker, Judy B. Coddling, 1998-01-23 This timely tough minded book shows how American public schools can be saved by instituting high standards for academic achievement Standards for Our Schools explains not just what the standards movement is about and why it is important but also what it will take to bring every student up to high standards no matter where that student starts The authors show how a single minded focus on achievement will change everything from the kinds of curriculum materials we use and the design of elementary and middle schools to the abandonment of the comprehensive high school and the institution of a diploma based on meeting standards rather than on attendance At the heart of this revolution are the performance standards themselves which provide clear expectations for student achievement by showing examples of standard setting student work Tucker and Coddling focus on empowering both students and adults by giving students the gift of high expectations and by giving school professionals the information skills authority and resources needed to do the job They advocate building a standards based instructional system creating a results oriented culture devoted to continuous improvement and making the institution and the people in it accountable for reaching the goals set by the standards This book lays out a step by step plan that will get struggling students to high standards as well as improve the performance of high achievers An extremely practical book it gives everyone involved in the education of our students the tools they need to do the job Standards for Our Schools will be the bible of standards based education and the foundation on which educators parents and policymakers can build the educational system of the future **Math Proofs Demystified**

Stan Gibilisco, 2005-05-13 Almost every student has to study some sort of mathematical proofs whether it be in geometry trigonometry or with higher level topics In addition mathematical theorems have become an interesting course for many students outside of the mathematical arena purely for the reasoning and logic that is needed to complete them Therefore it is not uncommon to have philosophy and law students grappling with proofs This book is the perfect resource for demystifying the techniques and principles that govern the mathematical proof area and is done with the standard Demystified level questions and answers and accessibility **The Educational list and directory , Access to Advanced Math for**
