I. Computer won't turn on

Solutions:

1. Check the power supply

- If it's a desktop, is the old power supply still there? A desktop that had completely stopped all of a sudden, the first thing to check/try doing is to see if power is not changed. Are all the buttons, all those connectors, cords, is correct, none of the changes is needed, yes, if you are trying a different change, if that change has a power indicator, check whether it lights up when you plug it in.
- If your PC is a desktop computer and power's not working, check that it's not the plug socket or fault by unplugging it into different socket. If unplugging's work, it could be that the power supply is not PC fully tested.
