

# Today I tried to install the DataBricks VS Code Extension. The "Before you begin" section has 40 links.

## Before you begin

Before you can use the Databricks extension for Visual Studio Code, your Databricks workspace and your local development machine must meet the following requirements.

### 1. Workspace requirements

- Local development machine requirements [2](#)
- Authentication requirements [3](#)

## Workspace requirements

You must have at least one Databricks workspace available, and the workspace must meet the following requirements:

- The workspace must contain at least one Databricks cluster. If you do not have a cluster available, you can create a cluster now or after you install the Databricks extension for Visual Studio Code. [4](#)

### Note

Databricks recommends that you create a Personal Compute cluster. This enables you to start running workloads immediately, minimizing compute management overhead.

Databricks SQL warehouses are not supported by this extension.

- The workspace must be enabled for Files in Repos, regardless of whether you use workspace directories, or files in Databricks Repos, as described in the next bullet. [7](#)
- The Databricks extension for Visual Studio Code relies primarily on workspace directories. See Set the workspace directory. [8](#)

### Note

The Databricks extension for Visual Studio Code also supports files in Databricks Repos within the Databricks workspace. However, Databricks only recommends using this feature if workspace directories are not available to you. See Set the repository. [9](#)

## 10

## Local development machine requirements

You must have the following on your local development machine:

- Visual Studio Code version 1.69.1 or higher. To view your installed version, click Code > About Visual Studio Code from the main menu on Linux or macOS and Help > About on Windows. To download, install, and configure Visual Studio Code, see Setting up Visual Studio Code. [13](#)
- Visual Studio Code must be configured for Python coding, including availability of a Python interpreter. For details, see Getting Started with Python in VS Code. [14](#)
- The Databricks extension for Visual Studio Code. See Install and open the extension. [15](#)

## Authentication requirements

The Databricks extension for Visual Studio Code implements portions of the Databricks client unified authentication standard, a consolidated and consistent architectural and programmatic approach to authentication. This approach helps make setting up and automating authentication with Databricks more centralized and predictable. It enables you to configure Databricks authentication once and then use that configuration across multiple Databricks tools and SDKs without further authentication configuration changes.

Before you can use the Databricks extension for Visual Studio Code, you must set up authentication between the Databricks extension for Visual Studio Code and your Databricks workspace. Depending on the type of authentication that you want to use, finish your setup by completing the following instructions in the specified order:

## 16

### Databricks personal access token authentication

1. Create or identify an access token, as specified in Databricks personal access token authentication. [17](#)
2. Create or identify a Databricks configuration profile with the required fields, as specified in Databricks personal access token authentication. [18](#)
3. Continue with getting started. [19](#)

## 21

4. Finish setting up authentication by continuing with Set up authentication with a configuration profile. [20](#)
5. Finish setting up your project by setting the cluster and setting the workspace directory. [22](#)

### Basic authentication

1. Create or identify a Databricks configuration profile with the required fields, as specified in Basic authentication. [24](#)
2. Continue with getting started. [25](#)
3. Finish setting up authentication by continuing with Set up authentication with a configuration profile. [26](#)
4. Finish setting up your project by setting the cluster and setting the workspace directory. [27](#)

### OAuth machine-to-machine (M2M) authentication

The Databricks extension for Visual Studio Code does not support OAuth M2M authentication.

### Note

Databricks Connect supports OAuth M2M authentication. However, you cannot use the Databricks Connect integration within the Databricks extension for Visual Studio Code to do OAuth M2M authentication. To use Databricks Connect with Visual Studio Code by itself, separate from the Databricks extension for Visual Studio Code, see Visual Studio Code with Python. [34](#)

### 32

- OAuth user-to-machine (U2M) authentication [35](#)

1. Complete the OAuth U2M authentication setup steps, as specified in Set up OAuth U2M authentication. [36](#)

## 38

2. Continue with getting started. [37](#)

## 39

3. Finish setting up authentication by continuing with Set up OAuth U2M authentication. [38](#)

4. Finish setting up your project by setting the cluster and setting the workspace directory. [39](#)
