| Score | | | | | |

| |
|--|
| Claim: |
| There are different aquatic systems with diverse organisms. |
| |
| |

| Evidence | Reasoning/Justification |
|---|---|
| Aquatic ecosystems have abiotic - temp, light, salinity, depth | Different organisms can tolerate different factors |
| Some organisms prefer fresh water vs. saltwater. Bull sharks + manatees tolerate both | Bull sharks and manatees are very different, but tolerate same conditions |
| Depth reduces light and increases pressure. Organisms deal with this differently. | Many types of adaptations exist to survive in these conditions |
| The geography of an aquatic environment can determine the life forms present. | Continental shelf gets lots of light, so there's many living things. Not so in the abyss. |
| Photosynthesis takes place in the neritic zone. | It is the most productive area of the ocean. Plankton are base of food chain. |
| Metabolism is affected by temp. Many species are cold-blooded. | Organisms can migrate or must have adaptations to survive. |
