

Introduction

Numerical methods apply algorithms that use *numerical* approximations to solve mathematical problems.

This is in contrast to applying *symbolic analytical* solutions, for example *Calculus*.

We will look at very basic, but useful *numerical* algorithms for:

1. Differentiation

2. Integration

3. Root finding

Bifurcation: Analysis, Algorithms, Applications KÜPPER, SEYDEL, TROGER, 2013-03-08 The conference on BIFURCATIONS ANALYSIS ALGORITHMS APPLICATIONS took place in Dortmund in August 18 22 1986 More than 150 Scientists from 16 countries participated in the meeting among them mathematicians engineers and physicists A broad spectrum of new results on bifurcation was covered by 49 talks The diversity of the range of treated topics and of involved fields inspired fruitful discussions 36 refereed papers are contained in these proceedings The subjects covered treat bifurcation problems ranging from theoretical investigations to numerical results with emphasis placed upon applications The more theoretical papers include the topics symmetry breaking delay differential equations Cornu spirals homoclinic orbits and selfsimilarity Different kinds of bifurcations are treated Hopf bifurcation bifurcation from continuous spectrum complex bifurcation and bifurcation near tori Several numerical aspects are discussed among them continuation block elimination and spectral methods Algorithms are proposed for approximating manifolds calculating periodic solutions and handling multi parameter problems Ample space is devoted to applications Classical phenomena from fluid mechanics such as convection rolls and the Taylor vortex problem buckling and reaction diffusion problems are considered Other applications of bifurcations include railway vehicle dynamics computer graphics semiconductors drilling processes simulation of oil reservoirs and rotor dynamics The proceedings reflect current research in bifurcation They are an attempt to bring together researchers from different disciplines to stimulate common effort towards a better understanding and handling of bifurcation problems

Bifurcation and Chaos: Analysis, Algorithms, Applications KÜPPER, SCHNEIDER, SEYDEL, TROGER, 2012-12-06 This volume contains the proceedings of a conference held in Würzburg August 20 24 1990 The theme of the conference was Bifurcation and Chaos Analysis Algorithms Applications More than 100 scientists from 21 countries presented 80 contributions Many of the results of the conference are described in the 49 refereed papers that follow The conference was sponsored by the Deutsche Forschungsgemeinschaft and by the Deutscher Akademischer Austauschdienst We gratefully acknowledge the support from these agencies The science of nonlinear phenomena is evolving rapidly Over the last 10 years the emphasis has been gradually shifting How trends vary may be seen by comparing these proceedings with previous ones in particular with the conference held in Dortmund 1986 proceedings published in ISNM 79 Concerning the range of

phenomena chaos has joined the bifurcation scenarios As expected the acceptance of chaos is less emotional among professionals than it has been in some popular publications Analytical methods appear to have reached a state in which basic results of singularities symmetry groups or normal forms are everyday experience rather than exciting news Similarly numerical algorithms for frequent situations are now well established Implemented in several packages such algorithms have become standard means for attacking nonlinear problems The sophistication that analytical and numerical methods have reached supports the vigorous trend to more and more applications Pioneering equations as those named after Duffing Van der Pol or Lorenz are no longer exclusively the state of art

Wittum, 2013-11-21 The GAMM Committee for Efficient Numerical Methods for Partial Differential Equations organizes workshops on subjects concerning the algorithmical treatment of partial differential equations The topics are discretization methods like the finite element and finite volume method for various types of applications in structural and fluid mechanics Particular attention is devoted to advanced solution techniques The

series of such workshops was continued in 1993 January 22-24 with the 9th Kiel Seminar on the special topic Adaptive Methods Algorithms Theory and Applications at the Christian Albrechts University of Kiel. The seminar was attended by 76 scientists from 7 countries and 23 lectures were given. The list of topics contained general lectures on adaptivity, special discretization schemes, error estimators, space-time adaptivity, adaptive solvers, multi-grid methods, wavelets and parallelization. Special thanks are due to Michael Heisig who carefully compiled the contributions to this volume.
