Object Perception Bryan E. Shepp,Soledad Ballesteros,2013-04-15 This collection of research on object perception focuses on holistic and featural properties of objects the mechanisms that produce such properties how people choose one type of property over another and how such choices are improved during the course of child development The contributions consider alternative perceptual characterizations the way in which such properties are represented in the mind how particular properties are more useful in some kinds of tasks that humans perform and how the developing child learns to cope with different properties in choosing among alternatives to optimize task performance These papers were written by specialists for specialists in experimental cognitive and developmental psychology **Multisensory Object Perception in the Primate Brain** Marcus Johannes Naumer,Jochen Kaiser,2010-07-03 It should come as no surprise to those interested in sensory processes that its research history is among the longest and richest of the many systematic efforts to understand how our bodies function The continuing obsession with sensory systems is as much a re ection of the fundamental need to understand how we experience the physical world as it is to understand how we become who we are based on those very experiences The senses function as both portal and teacher and their individual and collective properties have fascinated scientists and philosophers for millennia In this context the attention directed toward specifying their properties on a sense by sense basis that dominated sensory research in the 20th century seems a prelude to our current preoccupation with how they function in concert Nevertheless it was the concentrated effort on the operational principles of in vidual senses that provided the depth of understanding necessary to inform current efforts to reveal how they act cooperatively We know that the information provided by any individual sensory modality is not always veridical but is subject to a myriad of modality speci c distortions Thus the brain s ability to compare across the senses and to integrate the information they provide is not only a way to examine the accuracy of any individual sensory channel but also a way to enhance the collective information they make available to the brain **Blindness and Brain Plasticity in Navigation and Object Perception** John J. Rieser,Daniel H. Ashmead,Ford Ebner,Anne L. Corn,2007-08-10 Research into the development of sensory structures in the brains of blind or visually impaired individuals has opened a window into important ways in which the mind works In these individuals the part of the brain that is usually devoted to processing visual information is given over to increased processing of the touch and hearing sense This d **Representation in Object Perception** G. Humphreys,Social Science Research Council (Great Britain),1984 **The Psychological Study of Object Perception** Arild Lian,1981 *Object Perception and Recognition* J. Delacour,1997 **Modes of Perceiving and Processing Information** H. L. Pick, Jr.,E. Saltzman,2014-03-18 First published in 1978 Since World War II the field of perception has developed in two major directions The first evolved out of the traditional psychophysical approach and is manifest today in the new psychophysics The second direction is in the increasing bond between the fields of perception and cognition This volume grew out of the

context of this second direction a particular product of two workshops held in the Spring of 1974 and 1975 organized by the Committee on Cognitive Research of the Social Science Research Council The Committee on Cognition was organized in 1971 to encourage communication and interaction on specific problems in the area of cognition among the various social sciences From Fragments to Objects Thomas F. Shipley,Philip J. Kellman,2001-11-30 This book addresses the problem of how the human visual system organizes inputs that are fragmented in space and time into coherent stable perceptual units objects In doing so it addresses the following questions what kinds of segmentation and grouping abilities exist in human perceivers What information and computational processes achieve segmentation and grouping What are the psychological consequences of perceiving whole objects From Fragments to Objects Segmentation and Grouping in Vision takes a comprehensive cognitive science approach to object perception brings together separate lines of research in object perception in one volume gives an integrated and up to date review of theory and empirical research and offers directions for future study Jacket **Oxford Handbook of Human Action** Ezequiel Morsella,John A. Bargh,Peter M. Gollwitzer,2009 In the last decade there has been a tremendous surge of research on the mechanisms of human action This volume brings together this new knowledge in a single concise source covering most if not all of the basic questions regarding human action What are the mechanisms by which action plans are acquired learned mentally represented activated selected and expressed The chapters provide up to date summaries of the published research on this question with an emphasis on underlying mechanisms This bible of action research brings together the current thinking of eminent researchers in the domains of motor control behavioral and cognitive neuroscience psycholinguistics biology as well as cognitive developmental social and motivational psychology It represents a determined multidisciplinary effort spanning across various areas of science as well as national boundaries Advances in Neural Networks Research D.C. Wunsch II,M. Hasselmo,K. Venayagamoorthy,D. Wang,2003-08-22 IJCNN is the flagship conference of the INNS as well as the IEEE Neural Networks Society It has arguably been the preeminent conference in the field even as neural network conferences have proliferated and specialized As the number of conferences has grown its strongest competition has migrated away from an emphasis on neural networks IJCNN has embraced the proliferation of spin off and related fields see the topic list below while maintaining a core emphasis befitting its name It has also succeeded in enforcing an emphasis on quality **Perception** John M. Wilding,2017-03-16 Originally published in 1982 this book introduces the student to the central problem of all perceptual theories just how does the perceiver identify particular objects In focusing on the problem Dr Wilding provides a coherent well organized framework for its study bypassing the conventional split between perception and reaction time evidence which was common to most textbooks at the time The author draws on evidence from a wider number of research traditions and argues that each has a contribution to make to any account of perception Throughout he emphasizes the methodological basis of the research discussed in order to provide students with a solid foundation for their own practical work **Interaction of Object**

     Perception of Faces, Objects, and Scenes Mary A. Peterson,Gillian Rhodes,2003-05-22 From a barrage of photons we readily and effortlessly recognize the faces of our friends and the familiar objects and scenes around us However these tasks cannot be simple for our visual systems faces are all extremely similar as visual patterns and objects look quite different when viewed from different viewpoints How do our visual systems solve these problems The contributors to this volume seek to answer this question by exploring how analytic and holistic processes contribute to our perception of faces objects and scenes   **Gale Researcher Guide for: Object and Motion Perception** Raymond E. Phinney Jr.,2018-08-30 Gale Researcher Guide for Object and Motion Perception is selected from Gale s academic platform Gale Researcher These study guides provide peer reviewed articles that allow students early success in finding scholarly materials and to gain the confidence and vocabulary needed to pursue deeper research   Object Perception Through Tactile Objects Shan Luo,2016 To take advantage of both feature level and decision level fusion methods hybrid fusion approaches are developed to combine the decisions of ICLaP and single sensing modalities Furthermore to bridge the tactile sensing and vision both tactile and visual measurements are taken as images and thus Tactile SIFf descriptors can be extracted from both of them By doing this prominent features can be shared through vision and tactile sensing It is applied in the task of localizing the contact of a tactile sensor on the interacted object A visual image of the object is taken as a map in which the tactile sensor is localized
