Nano- and

Microencapsulation for Foods Hae-Soo Kwak,2014-04-02 Today nano and microencapsulation are increasingly being utilized in the pharmaceutical textile agricultural and food industries Microencapsulation is a process in which tiny particles or droplets of a food are surrounded by a coating to give small capsules These capsules can be imagined as tiny uniform spheres in which the particles at the core are protected from outside elements by the protective coating For example

vitamins can be encapsulated to protect them from the deterioration they would undergo if they were exposed to oxygen. This book highlights the principles, applications, toxicity and regulation of nano and microencapsulated foods. Section I describes the theories and concepts of nano and microencapsulation for foods adapted from pharmaceutical areas, rationales and new strategies of encapsulation and protection and controlled release of food ingredients. Section II looks closely at the nano and microencapsulation of food ingredients such as vitamins, minerals, phytochemicals, lipid, probiotics and flavors. This section provides a variety of references for functional food ingredients with various technologies of nano particles and microencapsulation. This section will be helpful to food processors and will deal with food ingredients for making newly developed functional food products. Section III covers the application of encapsulated ingredients to various foods such as milk and dairy products, beverages, bakery and confectionery products and related food packaging materials. Section IV touches on other related issues in nano and microencapsulation such as bioavailability, bioactivity, potential toxicity and regulation.

Encapsulation Technologies and Delivery Systems for Food Ingredients and Nutraceuticals Nissim Garti, D. Julian McClements, 2012-10-19. Improved technologies for the encapsulation, protection, release and enhanced bioavailability of food ingredients and nutraceutical components are vital to the development of future foods. Encapsulation technologies and delivery systems for food ingredients and nutraceuticals provides a comprehensive guide to current and emerging techniques. Part one provides an overview of key requirements for food ingredient and nutraceutical delivery systems, discussing challenges in system development and analysis of interaction with the human gastrointestinal tract. Processing technologies for encapsulation and delivery systems are the focus of part two. Spray drying, cooling and chilling are reviewed alongside coextrusion, fluid bed, microencapsulation, microencapsulation methods based on biopolymer phase separation and gelation phenomena in aqueous media. Part three goes on to investigate physicochemical approaches to the production of encapsulation and delivery systems including the use of micelles and microemulsions, polymeric amphiphiles, liposomes, colloidal emulsions, organogels and hydrogels. Finally, part four reviews characterization and applications of delivery systems, providing industry perspectives on flavour, fish oil, iron, micronutrient and probiotic delivery systems. With its distinguished editors and international team of expert contributors, Encapsulation technologies and delivery systems for food ingredients and nutraceuticals is an authoritative guide for both industry and academic researchers interested in encapsulation and controlled release systems. Provides a comprehensive guide to current and emerging techniques in encapsulation technologies and delivery systems. Chapters in part one provide an overview of key requirements for food ingredient and nutraceutical delivery systems while part two discusses processing technologies for encapsulation and delivery systems. Later sections investigate physicochemical approaches to the production of encapsulation and delivery systems and review characterization and applications of delivery systems.
