**Open Microfluidic Technologies for Fundamental and Applied Studies of Human Health and the Environment** Ulri Nicole Lee, 2022 This dissertation discusses the applications for open microfluidics in emerging technologies for studying human health and the environment Open microfluidics is a sub field of microfluidics that is quickly gaining traction for technologies across biology and the environment The open nature of the microchannels enables flexibility to the user for adding or removing components and makes it simple to use Chapter 1 introduces how microfluidics has traditionally been used and provides a background of open microfluidics and the common methods used to fabricate devices Chapter 2 evaluates rapid injection molding a more economical version of traditional injection molding for open microfluidic cell based technologies Minimum dimensions and dimension accuracy are investigated for applications with fluorescence imaging Chapter 3 highlights a novel method for generating droplets in an open microfluidic device that utilizes natural hydrostatic pressure and therefore does not require pumps or external equipment to generate the droplets Additionally potential use cases are presented for applications in

droplet manipulation patterning splitting and fusion Chapter 4 presents a layer by layer hydrogel patterning method made possible by spontaneous capillary flow An open microfluidic rail based device is used to pattern entire layers of hydrogels for biological applications in tissue engineering organoid development and 3D cell culture Chapter 5 presents a novel method for capturing airborne particles using microdroplets and open microfluidic channels for shuttling the collected sample across the device The work presented here demonstrates fundamental open microfluidic principles for droplet generation and fabrication as well as how open microfluidics can be applied to diverse fields of study such as hydrogel patterning and environmental sampling

*Advances in Prevention of Foodborne Pathogens of Public Health Concern during Manufacturing*

Aliyar Cyrus Fouladkhah, Bledar Bisha, 2019-11-27 According to a report from the U S Centers for Disease Control and Prevention CDC achieving safe and healthier foods was one of the top ten achievements of public health in the 20th century

However considerable persisting challenges currently exist in developed nations and developing economies for further assuring the safety and security of the food supplies According to CDC estimates as many as 3000 American adults as an example and based on a recent epidemiological estimate of the World Health Organization around 420 000 individuals around the globe lose their lives annually due to foodborne diseases This emphasizes the need for innovative and emerging interventions for further prevention or mitigation of the risk of foodborne microbial pathogens during food processing and manufacturing The current publication discusses recent advancements and progress in the elimination and decontamination of microbial pathogens during various stages of manufacturing and production Special emphasis is placed on hurdle validation studies investigating decontamination of non typhoidal *Salmonella enterica* serovars various serogroups of Shiga toxin producing *Escherichia coli* public health significant serotypes of *Listeria monocytogenes* and pathogenic species of *Cronobacter*

Conference, 2006. The papers in this book consider the existence and preservation of modern materials in the textile field. This is the first publication to present modern textiles as a subject in its own right and the content is intentionally multidisciplinary to demonstrate the wide spectrum of subjects involved in their preservation. Contributors include artists, curators, anthropologists, conservation scientists and conservators while topics cover the creation, collecting, interpretation, deterioration analysis and conservation of synthetic materials associated with textiles. This is the second in a series of three volumes of papers from the conferences of the Research Centre for Textile Conservation and Textile Studies.
