This book also discusses the microscopes and electronic flashlights for photomicrography, along with the use of monochromatic light, stereological and physicochemical microanalysis, microanalysis by electron microscopy and microdetermination of physical values. Attention then turns to staining and impregnation and methods of fixation, examination, cutting and mounting. The remaining chapters focus on the microscopy of topological stains and non-specific cytological stains, with emphasis on special methods used in animal and plant histology, and protistology and mycological methods in pathology. This book is written specifically for microscopists.
