Ai Image Generator Compare Same Day Delivery:

Build a Text-to-Image Generator (from Scratch) Mark Liu,2026-01-13 This book takes you step by step through creating your own AI models that can generate images from text. You'll explore two methods of image generation: vision transformers and diffusion models, and learn vital AI development techniques as you go. Dive into the powerful models behind AI image generators. The best way to learn is to build something from scratch, and in this book you'll build your very own diffusion model and vision transformer. As you work through each stage of development, you'll develop an understanding of how these models can be customized, applied, and integrated for impressive multimodal AI. *Build a Text to Image Generator from Scratch* teaches you how to build and train models to generate high-resolution images based on text descriptions. Edit an existing image based on text prompts. Build and train a model to add captions to images. Build and train a vision transformer to classify images. Fine-tune LLMs for downstream tasks such as classification, text or image generation. Better differentiate real images from deepfakes. About the technology: AI-generated images appear everywhere, from high-end advertising to casual social media feeds. Text-to-image tools like Dall-e, MidJourney, and Flux make it easy to create AI art, but how do they work? In this book, you'll find out by building your own text-to-image generator. About the book: *Build a Text to Image Generator from Scratch* explores both transformer-based image generation and diffusion models. You'll work hands-on to build a pair of simple generation models that can classify images, automatically add captions, reconstruct images, and enhance existing graphics. Author Mark Liu guides you every step of the way with clear explanations, informative diagrams, and eye-opening examples you can build on your own laptop. What's inside: *Build a vision transformer to classify images. Edit images using text prompts. Fine-tune image models.* About the reader: Requires basic knowledge of generative AI models and intermediate Python skills. About the author: Mark Liu is the founding director of the Master of Science in Finance program at the University of Kentucky. He is also the author of *Learn Generative AI with PyTorch*.

We Can Teach That Ewa Dziedzic-Elliott,2024-11-28 Information literacy is a complex subject that finally arrived at the doorstep of school libraries. For decades, academic researchers have been trying to capture the essence of information literacy: its educational, cognitive, and civic value. The collection of book chapters offered in *We Can Teach That* is a handbook that can be used as an inspiration for teaching various types of literacy: visual, digital, multicultural, health, and more. The book

asks important questions When do we start teaching information literacy How do we teach it How does it affect our students at their education level How does it prepare them for their post high school adult life Does it impact their transition to college or career Dziedzic Elliott and her collaborators provide a range of best practices and concepts that inspire thinking about teaching information literacy at all levels Although written with school librarians in mind the book can be easily adapted by teachers school administrators and even public librarians who are looking to incorporate information literacy elements in their daily practices The book challenges the reader to rethink what they know about digital or tech literacy breaks some stereotypical concepts about multicultural literacy and highlights the importance of literacies even in adulthood
