Visual Sensors Oscar Reinoso, Luis Payá, 2020-03-27 Visual sensors are able to capture a large quantity of information from the environment around them. A wide variety of visual systems can be found from the classical monocular systems to omnidirectional RGB D and more sophisticated 3D systems. Every configuration presents some specific characteristics that make them useful for solving different problems. Their range of applications is wide and varied including robotics industry, agriculture, quality control, visual inspection, surveillance, autonomous driving, and navigation aid systems. In this book, several problems that employ visual sensors are presented. Among them, we highlight visual SLAM, image retrieval, manipulation, calibration, object recognition, navigation, etc.

The ventricular-subventricular zone: a source of oligodendrocytes in the adult brain Oscar Gonzalez-Perez, Jose Manuel Garcia-Verdugo, Adan Aguirre, 2014-09-30 Demyelinating diseases are characterized by an extensive loss of oligodendrocytes and myelin sheaths from axolemma which commonly result in disability in young adults. To date, there is no effective treatment against these neurological disorders. In the adult brain, there are neural stem cells (NSCs) that reside within a niche denominated ventricular subventricular zone (V SVZ) in the lateral wall of the cerebral ventricles. NSCs give rise to neurons and oligodendrocytes that help preserve cellular homeostasis. Growing evidence indicates that V SVZ progenitor cells may represent an endogenous source of oligodendrocytes that can be useful to treat demyelinating diseases. This e-Book collects the most recent evidence regarding the mechanisms that modulate the proliferation, migration, quiescence, cell fate choices, and survival of oligodendrocyte precursors generated in the V SVZ. Herein, we compiled information about the role of Sonic hedgehog, NMDA receptors, ErbB proteins, hemopressin, erythropoietin, osmolarity, and microglia in the oligodendrocyte production. Some chapters also describe the role of oligodendrocyte precursors in the preservation of cellular homeostasis, aging, and white matter repair. All this information is presented as novel research findings, short communications, and review articles which were written by experts in the field of oligodendrocyte generation, myelin production, and white matter remyelination.

Auctions, Market Mechanisms and Their Applications Sanmay Das, Michael Ostrovsky, David Pennock, Boleslaw K. Szymanski, 2009-07-31 These proceedings present the technical contributions to the First Conference on Auctions, Market Mechanisms and Their Applications (AMMA) held May 8-9, 2009 in Boston, Massachusetts, USA. The conference was devoted to issues that arise in all stages of deploying a market mechanism to solve a problem, including theoretical and empirical examinations. In addition to more traditional academic papers, the conference placed emphasis on experiences from the real world, including case studies and new applications. The main goal of AMMA was to explore the synergy required for good mechanism design. This includes an understanding of the economic and game-theoretic issues, the ability to design protocols and algorithms for realizing desired outcomes, and the knowledge of specific institutional details that are important.
