Thyroid hormones and diet Joao D. T. S. Anselmo, Elisa Keating, Joseph V. Martin ,Lutz Schomburg, 2025-09-23 The field of thyroid hormones and diet is crucial for understanding the synthesis and function of thyroid hormones primarily thyroxine T4 and triiodothyronine T3 which are essential for various physiological processes including growth development and metabolism Iodine a critical dietary element is necessary for the production of these hormones yet iodine deficiency remains a significant global public health issue affecting approximately

two billion people This deficiency is particularly concerning during early development stages as the fetus relies entirely on maternal thyroid hormone production until the thyroid gland becomes functional Despite efforts to mitigate iodine deficiency through supplementation persistent cases of hypothyroidism suggest that other micronutrients such as selenium and iron also play vital roles in thyroid hormone function Recent studies have highlighted the importance of these trace elements in maintaining thyroid health yet gaps remain in understanding their comprehensive impact Additionally the presence of goitrogens which inhibit thyroid hormone synthesis and the emerging issue of iodine excess in certain populations underscore the complexity of dietary influences on thyroid physiology *Nutrition Abstracts and Reviews* ,2006
