Innovative Strategies,

Statistical Solutions and Simulations for Modern Clinical Trials Mark Chang,John Balser,Jim Roach,Robin Bliss,2019-03-20 This is truly an outstanding book It brings together all of the latest research in clinical trials methodology and how it can be applied to drug development Chang et al provide applications to industry supported trials This will allow statisticians in the industry community to take these methods seriously Jay Herson Johns Hopkins University The pharmaceutical industry s approach to drug discovery and development has rapidly transformed in the last decade from the more traditional Research and Development R D approach to a more innovative approach in which strategies are employed to compress and optimize the clinical development plan and associated timelines However these strategies are generally being considered on an individual trial basis and not as part of a fully integrated overall development program Such optimization at the trial level is somewhat near sighted and does not ensure cost time or development efficiency of the overall program This book seeks to address this imbalance by establishing a statistical framework for overall global clinical development

optimization and providing tactics and techniques to support such optimization including clinical trial simulations Provides a statistical framework for achieve global optimization in each phase of the drug development process Describes specific techniques to support optimization including adaptive designs precision medicine survival endpoints dose finding and multiple testing Gives practical approaches to handling missing data in clinical trials using SAS Looks at key controversial issues from both a clinical and statistical perspective Presents a generous number of case studies from multiple therapeutic areas that help motivate and illustrate the statistical methods introduced in the book Puts great emphasis on software implementation of the statistical methods with multiple examples of software code both SAS and R It is important for statisticians to possess a deep knowledge of the drug development process beyond statistical considerations For these reasons this book incorporates both statistical and clinical medical perspectives

A Candidate Gene Analysis for Response to *Salmonella Enteritidis* Challenge Or Vaccination in Young Chicks

Wei Liu,2002 *Salmonella enteritidis* SE contamination of poultry products is a major cause of food borne disease worldwide The candidate gene approach for identification of quantitative trait loci QTL for chicken response to *Salmonella enteritidis* SE was applied in the current study The Iowa *Salmonella* Response Resource Population ISRRP formed by crossing outbred broiler sires with three diverse highly inbred dam lines two major histocompatibility complex congenic Leghorn lines G B1 and G B2 and one Fayoumi line was studied The F1 generation was evaluated as young chicks for either bacterial load in spleen and cecum after pathogenic SE inoculation or antibody level after SE vaccination The unique cross between genetically distant parental lines generated a high level of genetic variation which had the advantage of improving the detection of linkage between markers and QTL The use of multiple dam lines allowed detection of interaction of sire alleles with the genes of different dam lines Because the founder lines were genetically distinct and the dam lines are highly inbred with inbreeding coefficient 99% the F1 generation was informative for all loci that were heterozygous in the sire The natural resistance associated macrophage protein 1 NRAMP1 the major histocompatibility complex MHC class I and class II caspase 1 and the inhibitor of apoptosis proteins 1 1AP 1 were selected as candidate gene based on their biological functions Prosaposin was selected as a positional candidate gene based on a previous linkage disequilibrium analysis for identification of QTL using the same population Single nucleotide polymorphisms SNPs of these candidate genes were identified by comparing the sequences of all four sires and two dams from each dam line Polymerase chain reaction restriction fragment length polymorphism or single strand conformational polymorphism and base excision sequence scanning T Scan analyses were applied to genotype all F1 offspring of heterozygous sires for each candidate gene All the candidate genes were associated with bacterial load in spleen and cecum after challenge with SE or antibody response to SE vaccination in ISRRP or both These genes are therefore strong potential candidates for application in marker assisted selection to improve genetic resistance to disease or enhance vaccine efficacy in breeding populations *The Journal of Rheumatology* ,2006
