topics taught in school such as division long multiplication fractions and algebra Mastering the basic math facts develops  
automaticity in kids Automaticity is the ability to do things without occupying the mind with the low level details that are  
required this is usually the result of consistent learning repetition and practice For instance an experienced cyclist does not  
have to concentrate on turning the pedals balancing and holding on to the handlebars Instead those processes are automatic  
and the cyclist can concentrate on watching the road the traffic and other surroundings Until students have developed  
sufficient sensory cognitive tools supporting access to symbolic memory they will not be able to image store or retrieve all of
