Finite Element Bibliography Gerard De Vries, 1976-12 This bibliography had its inception in 1967 when the compilers first attempted a comprehensive coverage of the finite element literature using both manual and computer based retrieval Initially the data base was stored on a card index but this was subsequently transferred to punched cards and magnetic tape Computer processing was adopted at an early stage to derive the three index formats from the data base Over the subsequent years several versions of the bibliography were produced with two of these being made available in a report form to other researchers From the widespread interest in these documents it became evident that there was a need for a commercially available comprehensive bibliography in this area A major effort was undertaken to revise update and extend the data base resulting in this present volume The bibliography covers the period 1956 1975 primarily although some earlier publications of historical interest are included The citations are not restricted to the English language and documents are listed in many languages and from diverse places of origin All publication formats were accepted so that references will be found to books monographs journal papers and articles theses dissertations reports surveys and the like

Government Reports Announcements & Index, 1996 **Fatigue Behaviour of Offshore Structures** Ashok Gupta, Ramesh P. Singh, 2012-12-06 and Literature Review Chapter 1 1 INTRODUCTION AND LITERATURE REVIEW The exploration for oil and gas in ever increasing water depths has given an impetus to research efforts on the behaviour of offshore structures under ocean environment These structures are continuously subjected to environmental loading because of waves wind and current A response analysis is required to assess the safety of offshore structure under severe storm conditions as well as for estimation of damage caused by less severe but more frequently occurring sea states A majority of the reported failures in the life time of offshore structures are in fact fatigue failures The offshore structures are usually built in the form of welded tubular structures The joints of these tubular members experience the fatigue damage mainly due to small defects in welding which act as crack initiators high stress concentrations and the variable loads The variable loads due to the ocean waves cause cyclic stress variation in the structural members and the accumulated effect of these stresses results in the fatigue failure *ASCE Combined Index* American Society of Civil Engineers, 1998 Indexes materials appearing in the Society's Journals Transactions Manuals and reports Special publications and Civil engineering [Oceanic Abstracts](#), 1995-11 **Government Reports Annual Index**, 1983 [Dissertation Abstracts International](#), 1985-05 [Fatigue Analysis of Offshore Structures](#) M.
