

2. Attach a lead-away hose at the top of the radiator.
3. Attach a new piece of hose to the radiator outlet connection and insert the flushing gun in this hose.

**NOTE:** On 1950-53 Powerglide models it is necessary to disconnect oil lines from cooler and remove cooler.

4. Connect the water hose of the flushing gun to a water outlet and the air hose to an air line.
5. Turn on the water and when the radiator is full, turn on the air in short blasts, allowing the radiator to fill between blasts of air (fig. 121).

Fig. 121—Reverse Flushing Radiator

**CAUTION.** Apply air gradually as a clogged radiator will stand only a limited pressure.

6. Continue this flushing until the water from the lead-away hose runs clear.

#### Cylinder Block and Cylinder Head

1. With thermostat removed attach a lead-away hose to the water pump inlet and a length of new hose to the water outlet connection at the top of the engine.
2. Insert the flushing gun in the new hose.
3. Turn on the water and when the engine water jacket is full turn on the air in short blasts (fig. 122).
4. Continue this flushing until the water from the lead-away hose runs clear.

Fig. 122—Reverse Flushing Block and Head

#### Hot Water Heater

1. Remove water outlet hose from heater core pipe.
2. Remove inlet hose from engine connection.
3. Insert flushing gun and flush heater core. Care must be taken when applying air pressure to prevent damage to the core.

After cooling system has been cleaned and reverse flushed the system should be thoroughly reconditioned. Procedure for reconditioning as outlined under "Anti-Freeze" in this section should be followed.

Dirt and bugs may be cleaned out of the radiator air passages by blowing out with air pressure from the back of the core.

#### WATER PUMP AND FAN

The water pump (fig. 123) is the ball bearing type and requires no care other than to make certain the air vent at the top of the housing and the drain holes in the bottom do not become plugged with dirt or grease.

The shaft and the double row ball bearings are integral. The bearing is packed with a special high melting point grease at the time of manufacture and requires no further lubrication.

The ends of the bearing are sealed to retain the lubricant and prevent dust and dirt from entering.
