Multimedia Forensics Husrev Taha Sencar, Luisa Verdoliva, Nasir Memon, 2022-04-02 This book is open access. Media forensics has never been more relevant to societal life. Not only does media content represent an ever-increasing share of the data traveling on the net and the preferred communications means for most users, it has also become an integral part of most innovative applications in the digital information ecosystem that serves various sectors of society, from entertainment to journalism to politics. Undoubtedly, the advances in deep learning and computational imaging contributed significantly to this outcome. The underlying technologies that drive this trend, however, also pose a profound challenge in establishing trust in what we see, hear, and read, and make media content the preferred target of malicious attacks. In this new threat landscape, powered by innovative imaging technologies and sophisticated tools based on autoencoders and generative adversarial networks, this book fills an important gap. It presents a comprehensive review of state-of-the-art forensics capabilities that relate to media attribution, integrity, and authenticity verification and counter forensics. Its content is developed to provide practitioners, researchers, photo, and video
