Measurements And Estimations Of Forest Stand Parameters Using Remote Sensing:

Measurements and Estimations of Forest Stand Parameters Using Remote Sensing Donald A. Stellingwerf, Yousif Ali Hussin, 1997-08 Generally speaking the use of remote sensing imagery will reduce field work Remote sensing imagery gives an overall view of the forest in addition to more detailed information the extent of which depends mainly on scale and film used in case of analogue data and mainly on pixel size in case of digital data This book deals with measurements and estimations of forest stand parameters using aerial photographic aircraft and satellite scanning data radar and laser imagery It includes technical and statistical information of practical examples from both temperate and tropical forests Statistical analysis of measurement data and sampling techniques are given when required The obtained results are compared with those from other techniques showing their relative advantage or disadvantage

Field Measurements for Forest Carbon Monitoring Coeli M Hoover, 2008-10-20 In the summer of 2003 a workshop was held in Portsmouth NH to discuss land measurement techniques for the North American Carbon Program Over 40 scientists representing government agencies academia and nonprofit research organizations located in Canada the US and Mexico participated During the course of the workshop a number of topics were discussed with an emphasis on the following The need for an intermediate tier of carbon measurements This level of study would be more extensive than state level inventories of the US Forest Service Forest Inventory and Analysis Program but less detailed than intensive ecosystem studies sites such as those in Long Term Ecological Research network This tier would ideally provide a basis to link and scale remote sensing measurements and inventory data and supply data required to parameterize existing models see Wofsy and Harriss 2002 Denning et al 2005 The design criteria that such a network of sites should meet The network and sampling design should be standardized but flexible enough to be applied across North America The design also needs to be efficient enough to be implemented without the need for large field crews yet robust enough to provide useful information Finally the spatial scale must permit easy linkage to remotely sensed data The key variables that should be measured at each site and the frequency of measurement

Polarimetric Synthetic Aperture Radar Irena Hajnsek, Yves-Louis Desnos, 2021-03-24 This open access book focuses on the practical application of electromagnetic polarimetry principles in Earth remote sensing with an educational purpose In the last decade the operations from fully polarimetric synthetic aperture radar such as the Japanese ALOS PALSAR the Canadian Radarsat 2 and the German TerraSAR X and their easy data access for scientific use have developed further the research and data applications at L C and X band As a consequence the wider distribution of polarimetric data sets across the remote sensing community boosted activity and development in polarimetric SAR applications also in view of future missions Numerous experiments with real data from spaceborne platforms are shown with the aim of giving an up to date and complete treatment of the unique benefits of fully polarimetric synthetic aperture radar data in five different domains forest agriculture cryosphere urban and oceans

Spatial Analysis, Modelling and Planning Jorge Rocha, José António Tenedório, 2018-11-28 New powerful technologies such as geographic information systems GIS have been evolving and are quickly becoming part of a worldwide emergent digital infrastructure Spatial analysis is becoming more important than ever because enormous volumes of spatial data are available from different sources such as social media and mobile phones When locational information is provided spatial analysis researchers can use it to calculate statistical and mathematical relationships through time and space This book aims to demonstrate how computer methods of spatial analysis and modeling integrated in a GIS environment can be used to better understand reality and give rise to more informed and thus improved planning It provides a comprehensive discussion of spatial analysis methods and approaches related to planning

Growing Stock Volume Estimation in Temperate Forested Areas Using a Fusion Approach with SAR Satellites Imagery Nicolas Ackermann, 2014-12-05 The PhD thesis written by Mr Ackermann is an outstanding and in depth scientific study that closes a research gap and paves the way to new developments Despite the extremely complex issues his work is very understandable and excellently elaborated Prof Dr Christiane Schmullius The PhD thesis written by Mr Ackermann is an excellent and very comprehensive work performed at the highest scientific level It examines in detail the potential of SAR data with regards to the derivation of forest stem volume in the temperate latitudes The work belongs to a technically complex field Nevertheless Mr Ackermann has succeeded in presenting the content in a clear and understandable way Dr Christian Thiel The proposed document is overall of very good quality Mr Ackermann has done an exhaustive analysis of the in situ data available on the Thuringian forest and was able to derive Growing Stocking Volume using L and X band spaceborne SAR data The document is very well structured with a good split of information between the core of the text presented in the 6 chapters and the 4 annexes which contain detailed results Mr Ackermann's English grammar is excellent and his syntax is crystal clear making his document pleasant to read The way arguments are presented is logical and Mr Ackermann gives a lot of attention to ensuring that sound explanations properly support these arguments Dr Maurice Borgeaud

Forest Resources Resilience and Conflicts Pravat Kumar Shit, Hamid Reza Pourghasemi, Partha Pratim Adhikary, Gouri Sankar Bhunia, Vishwambhar Prasad Sati, 2021-06-24 Forest Resources Resilience and Conflicts presents modern remote sensing and GIS techniques for Sustainable Livelihood It provides an up to date critical analysis of the discourse surrounding forest resources and society illustrating the relationship between forest resources and the livelihood of local people The book is organized into four parts consisting of 31 chapters Each chapter then reviews current understanding present research and future implications Utilizing case studies and novel advances in

geospatial technologies Forest Resources Resilience and Conflicts provides a timely synthesis of a rapidly growing field and stimulates ideas for future work especially considering sustainable development goals In addition the book presents the effective contribution of the forestry sector to populations livelihoods through improved collection of forestry statistics that foster the understanding and integration of the forestry sector in poverty reduction processes and the national economy to enhance its integration in national planning It is a valuable resource for researchers and students in environmental science especially those interested in forestry geography and remote sensing Demonstrates tools and techniques for measurement monitoring mapping and modeling of forest resources Explores state of the art techniques using open source software statistical programming and GIS focusing on recent trends in data mining and machine learning Addresses a wide range of issues with both environmental and societal implications Provides a global review of the multiple roles of forest resources utilizing case studies to illustrate management strategies and techniques **Canadian Journal of Forest Research** ,2013
