Multimodal Signal Processing Human Interactions In Meetings:

Multimodal Signal Processing, 2012 This book is an introduction to multimodal signal processing In it we use the goal of building applications that can understand meetings as a way to focus and motivate the processing we describe Multimodal signal processing takes the outputs of capture devices running at the same time primarily cameras and microphones but also electronic whiteboards and pens and automatically analyses them to make sense of what is happening in the space being recorded For instance these analyses might indicate who spoke what was said whether there was an active discussion and who was dominant in it These analyses require the capture of multimodal data using a range of signals followed by a low level automatic annotation of them gradually layering up annotation until information that relates to user requirements is extracted

Multimodal Interactive Systems Management Herve Bourlard, Andrei Popescu-Belis, 2014-01-07 This book provides a synthesis of the multifaceted field of interactive multimodal information management The subjects treated include spoken language processing image and video processing document and handwriting analysis identity information and interfaces The book concludes with an overview of the highlights of the progress of the field dur Interactive Multimodal Information Management Hervé Bourlard, Andrei Popescu-Belis, 2021-04-15 In the past twenty years computers and networks have gained a prominent role in supporting human communications This book presents recent research in multimodal information processing which demonstrates that computers can achieve more than what telephone calls or videoconferencing can do The book offers a snapshot of current capabilities for the analysis of human communications in several modalities audio speech language images video and documents and for accessing this information interactively The book has a clear application goal which is the capture automatic analysis storage and retrieval of multimodal signals from human interaction in meetings This goal provides a controlled experimental framework and helps generating shared data which is required for methods based on machine learning This goal has shaped the vision of the contributors to the book and of many other researchers cited in it It has also received significant long term support through a series of projects including the Swiss National Center of Competence in Research NCCR in Interactive Multimodal Information Management IM2 to which the contributors to the book have been connected *Advances in Artificial Intelligence* Richard Khoury, Christopher Drummond, 2016-05-13 This book constitutes the refereed proceedings of the 29th Canadian Conference on Artificial Intelligence Canadian AI 2016 held in Victoria BC Canada in May June 2016 The 12 full papers and 27 short papers presented were carefully reviewed and selected from 97 submissions The focus of the conference was on the following subjects actions and behaviours audio and visual recognition natural language processing reasoning and learning streams and distributed computing *Human Computer Interaction Handbook* Julie A.
