Multiscale Analysis And Nonlinear Dynamics From Genes To The Brain:

Multiscale Analysis and Nonlinear Dynamics Misha Meyer Pesenson,2013-09-13 Since modeling multiscale phenomena in systems biology and neuroscience is a highly interdisciplinary task the editor of the book invited experts in bio engineering chemistry cardiology neuroscience computer science and applied mathematics to provide their perspectives Each chapter is a window into the current state of the art in the areas of research discussed and the book is intended for advanced researchers interested in recent developments in these fields While multiscale analysis is the major integrating theme of the book its subtitle does not call for bridging the scales from genes to behavior but rather stresses the unifying perspective offered by the concepts referred to in the title It is believed that the interdisciplinary approach adopted here will be beneficial for all the above mentioned fields

Nonequilibrium Statistical Physics of Small Systems Rainer Klages,Wolfram Just,Christopher Jarzynski,2013-03-15 This book offers a comprehensive picture of nonequilibrium phenomena in nanoscale systems Written by internationally recognized experts in the field this book strikes a balance between theory and experiment and includes in depth introductions to nonequilibrium fluctuation relations nonlinear dynamics and transport single molecule experiments and molecular diffusion in nanopores The authors explore the application of these concepts to nano and biosystems by cross linking key methods and ideas from nonequilibrium statistical physics thermodynamics stochastic theory and dynamical systems By providing an up to date survey of small systems physics the text serves as both a valuable reference for experienced researchers and as an ideal starting point for graduate level students entering this newly emerging research field

Physics of the Human Mind Ihor Lubashevsky,2017-02-12 This book tackles the challenging question which mathematical formalisms and possibly new physical notions should be developed for quantitatively describing human cognition and behavior in addition to the ones already developed in the physical and cognitive sciences Indeed physics is widely used in modeling social systems where in particular new branches of science such as sociophysics and econophysics have arisen However many if not most characteristic features of humans like willingness emotions memory future prediction and moral norms to name but a few are not yet properly reflected in the paradigms of physical thought and theory The choice of a relevant formalism for modeling mental phenomena requires the comprehension of the general philosophical questions related to the mind body problem Plausible answers to these questions are investigated and reviewed notions and concepts to be used or to be taken into account are developed and some challenging questions are posed as open problems This text addresses theoretical physicists and neuroscientists modeling any systems and processes where human factors play a crucial role philosophers interested in applying philosophical concepts to the construction of mathematical models and the mathematically oriented psychologists and sociologists whose research is fundamentally related to modeling mental processes

The Oxford Handbook of Psycholinguistics Shirley-Ann Rueschemeyer,M. Gareth Gaskell,2018-09-06 The ability to communicate quickly and flexibly through both spoken and

written language is one of the defining characteristics of the human race Yet it remains a mysterious process The science of psycholinguistics attempts to uncover the mechanisms and representations underlying human language This interdisciplinary field has seen massive developments over the last decades with a broad expansion of the research base and the incorporation of new experimental techniques such as brain imaging and computational modelling The result is that real progress is being made in the understanding of the key components of language in the mind This new and expanded edition of The Oxford Handbook of Psycholinguistics brings together the views of over 80 experts in various domains of psycholinguistic research offering a comprehensive and authoritative review of the field With contributions from the fields of psychology linguistics cognitive neuroscience attention genetics development and neuropsychology divided into five themed sections this new edition of The Oxford Handbook of Psycholinguistics is unparalleled in its breadth of coverage The comprehensive nature of this book coupled with the accessibility of the short chapter format makes this handbook essential reading for students and researchers in the fields of psychology linguistics and neuroscience

Closed Loop Neuroscience Ahmed El

Hadly,2016-09-08 Closed Loop Neuroscience addresses the technical aspects of closed loop neurophysiology presenting the implementation of these approaches spanning several domains of neuroscience from cellular and network neurophysiology through sensory and motor systems and then clinical therapeutic devices Although closed loop approaches have long been a part of the neuroscientific toolbox these techniques are only now gaining popularity in research and clinical applications As there is not yet a comprehensive methods book addressing the topic as a whole this volume fills that gap presenting state of the art approaches and the technical advancements that enable their application to different scientific problems in neuroscience Presents the first volume to offer researchers a comprehensive overview of the technical realities of employing closed loop techniques in their work Offers application to in vitro in vivo and hybrid systems Contains an emphasis on the actual techniques used rather than on specific results obtained Includes exhaustive protocols and descriptions of software and hardware making it easy for readers to implement the proposed methodologies Encompasses the clinical neuroprosthetic aspect and how these systems can also be used to contribute to our understanding of basic neurophysiology Edited work with chapters authored by leaders in the field from around the globe the broadest most expert coverage available

Handbook of Research Methods in Complexity Science Eve Mitleton-Kelly,Alexandros Paraskevas,Christopher Day,2018-01-26 This comprehensive Handbook is aimed at both academic researchers and practitioners in the field of complexity science The book's 26 chapters specially written by leading experts provide in depth coverage of research methods based on the sciences of complexity The research methods presented are illustratively applied to practical cases and are readily accessible to researchers and decision makers alike

Evolutionary Computation in Gene Regulatory Network Research Hitoshi

Iba,Nasimul Noman,2016-01-20 Introducing a handbook for gene regulatory network research using evolutionary computation with applications for computer scientists computational and system biologists This book is a step by step

guideline for research in gene regulatory networks GRN using evolutionary computation EC The book is organized into four parts that deliver materials in a way equally attractive for a reader with training in computation or biology Each of these sections authored by well known researchers and experienced practitioners provides the relevant materials for the interested readers The first part of this book contains an introductory background to the field The second part presents the EC approaches for analysis and reconstruction of GRN from gene expression data The third part of this book covers the contemporary advancements in the automatic construction of gene regulatory and reaction networks and gives direction and guidelines for future research Finally the last part of this book focuses on applications of GRNs with EC in other fields such as design engineering and robotics Provides a reference for current and future research in gene regulatory networks GRN using evolutionary computation EC Covers sub domains of GRN research using EC such as expression profile analysis reverse engineering GRN evolution applications Contains useful contents for courses in gene regulatory networks systems biology computational biology and synthetic biology Delivers state of the art research in genetic algorithms genetic programming and swarm intelligence Evolutionary Computation in Gene Regulatory Network Research is a reference for researchers and professionals in computer science systems biology and bioinformatics as well as upper undergraduate graduate and postgraduate students Hitoshi Iba is a Professor in the Department of Information and Communication Engineering Graduate School of Information Science and Technology at the University of Tokyo Toyko Japan He is an Associate Editor of the IEEE Transactions on Evolutionary Computation and the journal of Genetic Programming and Evolvable Machines Nasimul Noman is a lecturer in the School of Electrical Engineering and Computer Science at the University of Newcastle NSW Australia From 2002 to 2012 he was a faculty member at the University of Dhaka Bangladesh Noman is an Editor of the BioMed Research International journal His research interests include computational biology synthetic biology and bioinformatics

Information Science for Materials Discovery and Design Turab Lookman,Francis J. Alexander,Krishna Rajan,2015-12-12 This book deals with an information driven approach to plan materials discovery and design iterative learning The authors present contrasting but complementary approaches such as those based on high throughput calculations combinatorial experiments or data driven discovery together with machine learning methods Similarly statistical methods successfully applied in other fields such as biosciences are presented The content spans from materials science to information science to reflect the cross disciplinary nature of the field A perspective is presented that offers a paradigm codesign loop for materials design to involve iteratively learning from experiments and calculations to develop materials with optimum properties Such a loop requires the elements of incorporating domain materials knowledge a database of descriptors the genes a surrogate or statistical model developed to predict a given property with uncertainties performing adaptive experimental design to guide the next experiment or calculation and aspects of high throughput calculations as well as experiments The book is about manufacturing with the aim to halving the time to discover and design new materials

Accelerating discovery relies on using large databases computation and mathematics in the material sciences in a manner similar to the way used to in the Human Genome Initiative Novel approaches are therefore called to explore the enormous phase space presented by complex materials and processes To achieve the desired performance gains a predictive capability is needed to guide experiments and computations in the most fruitful directions by reducing not successful trials Despite advances in computation and experimental techniques generating vast arrays of data without a clear way of linkage to models the full value of data driven discovery cannot be realized Hence along with experimental theoretical and computational materials science we need to add a fourth leg to our toolkit to make the Materials Genome a reality the science of Materials Informatics **Mathematical Reviews**, 2008 **Population Genetics, Quantitative Genetics and**
