Multiscale Modelling of Materials ,1999 Multiscale Modelling of Materials: Vasily V. Bulatov,Tomas Diaz de la Rubia,Rob Phillips,Efthimios Kaxiras,Nasr Ghoniem,2014-06-05 An emerging theme in computational materials science is that of multiscale modelling While the definition of multiscale modelling is still developing as new applications appear a broad interpretation includes efforts to exploit insights arising either from distinct methodologies or from the attempt to incorporate multiple mechanisms into the same modelling paradigm Though multiple scale models are not new the topic has recently taken on a new sense of urgency due to the recognition that brute force computational approaches often fall short of allowing for direct simulation of both the characteristic structures and temporal processes found in real materials As a result a number of approaches are now finding favor in which ideas borrowed from modelling paradigms are unified to produce more powerful techniques This book first published in 1999 brings together experts to both exchange ideas on how to link methodologies at different length scales and to outline the most promising future approaches Topics include modelling dislocation properties and behavior defect dynamics and microstructural evolution crystal defects and interfaces and noncrystalline and nanocrystalline materials Dislocations in Solids ,2009-08-28 New materials addressed for the first time include the chapters on minerals by Barber et al and the chapter on dislocations in colloidal crystals by Schall and Spaepen Moriarty et al extend the first principles calculations of kink configurations in bcc metals to high pressures including the use of flexible boundary conditions to model dilatational effects Rabier et al clarify the issue of glide shuffle slip systems in diamond cubic and related III V compounds Metadislocations discussed by Feuerbacher and Heggen represent a new type of defect in multicomponent metal compounds and alloys Kink mechanisms for dislocation motion at high pressure in bcc metals Dislocation core structures identified in silicon at high stress Metadislocations a new type of defect identified and described Extension of dislocation concepts to complex minerals First observations of dislocations in colloidal crystals IUTAM Symposium on Mesoscopic Dynamics of Fracture Process and Materials Strength H. Kitagawa,Y. Shibutani,2013-11-11 This volume contains the papers presented at the IUT AM Symposium of Mesoscopic Dynamics of Fracture Process and Materials Strength held in July 2003 at the Hotel Osaka Sun Palace Osaka Japan The Symposium was proposed in 2001 aiming at organizing concentrated discussions on current understanding of fracture process and inhomogeneous deformation governing the materials strength with emphasis on the mesoscopic dynamics associated with evolutionary mechanical behaviour under micro macro mutual interaction The decision of the General Assembly of International Union of Theoretical and Applied Mechanics IUT AM to accept our proposal was well timed and attracted attention Driven by the development of new theoretical and computational techniques various novel challenges to investigate the mesoscopic dynamics have been actively done recently including large scaled 3D atomistic simulations discrete dislocation dynamics and other micro mesoscopic computational analyses The Symposium attracted sixty six participants from eight countries and forty two papers
