Music Recommendation And Discovery

Music Recommendation and Discovery Oscar Celma,2010-09-02 In the last 15 years we have seen a major transformation in the world of music sicians use inexpensive personal computers instead of expensive recording studios to record mix and engineer music Musicians use the Internet to distribute their sic for free instead of spending large amounts of money creating CDs hiring trucks and shipping them to hundreds of record stores As the cost to create and distribute recorded music has dropped the amount of available music has grown dramatically Twenty years ago a typical record store would have music by less than ten thousand artists while today online music stores have music catalogs by nearly a million artists While the amount of new music has grown some of the traditional ways of nding music have diminished Thirty years ago the local radio DJ was a music tastemaker nding new and interesting music for the local radio audience Now dio shows are programmed by large corporations that create playlists drawn from a limited pool of tracks Similarly record stores have been replaced by big box reta ers that have ever shrinking music departments In the past you could always ask the owner of the record store for music recommendations You would learn what was new what was good and what was selling Now however you can no longer expect that the teenager behind the cash register will be an expert in new music or even be someone who listens to music at all

Directory of members published as pt 2 of Apr 1954 issue *A Historical Survey of Music Recommendation Systems* Ying Qin,2013 The development of the Internet and the emergence of audio compression technologies have contributed to the realization of making millions of music titles accessible to millions of users Due to the extensive distribution of music consumers are being presented with a problem of information overload while the music industry is being faced with the challenge of personalized promotion and distribution Music recommendation systems aim to ease the task of finding the

music items that might interest the users by generating meaningful recommendations. The recommendation for music is different from those for books and movies due to its low cost per item, short consumption time, high per item reuse, highly contextual usage and numerous item types. Understanding the patterns of music listening and consumption is important to create accurate and satisfying music recommendations. This thesis reviews state of the art music recommendation and discovery methods with the goal of presenting the historical developments in this area. Traditional music recommendation systems can be classified as one of two major kinds: collaborative filtering and content based filtering. Recently the research community has broadened its attention to include other aspects such as hybrid approaches, context awareness, social tagging, music networks visualization, playlist generation and group recommendation. For the evaluation of music recommendation systems, researchers or developers need to take into account properties such as accuracy, coverage, confidence, novelty, diversity and privacy. These properties can be measured in an offline simulation, a user study or an online evaluation.

Suggestions for future work in both the design and the evaluation of music recommendation systems are given. *Music Recommendation and Discovery in the Long Tail*, 2002. Resum: Avui en dia la música es consumida de forma esbiaixada cap a uns artistes molt populars. Per exemple, el 2007 només el 1% de totes les cançons en format digital va representar el 80% de les vendes. De la mateixa manera, només 1.000 àlbums varen representar el 50% de totes les vendes i el 80% de tots els àlbums venuts es varen comprar menys de 100 vegades. Es clar que hi ha una necessitat per tal d'ajudar a les persones a filtrar, descobrir, personalitzar i recomanar música a partir de l'enorme quantitat de contingut musical disponible. Els algorismes de recomanació de música actuals intenten predir amb precisió el que els usuaris demanen escoltar. Tanmateix, molt sovint, aquests algoritmes tendeixen a recomanar artistes famosos o coneguts d'avantm per l'usuari. Això fa que disminueixi l'eficiència i l'utilitat de les recomanacions, ja que aquests algorismes es centren bàsicament en millorar la precisió de les recomanacions, sense tenir en compte que els usuaris puguin escoltar o comprar independentment de quants títols siguin les recomanacions generades. En aquesta tesi, destaquem la importància que l'usuari valori les recomanacions rebudes. Per aquesta raó, modelem la corba de popularitat dels artistes per tal de poder recomanar música interessant i desconeguda per l'usuari. Les principals contribucions d'aquesta tesi són: i) un nou enfocament basat en l'anàlisi de xarxes complexes i la popularitat dels productes aplicada als sistemes de recomanació; ii) una avaluació centrada en l'usuari que mesura la importància i la desconeixença de les recomanacions; i iii) dos prototips que implementen les idees derivades de la tasca teòrica. Els resultats obtinguts tenen una clara implicació per aquells sistemes de recomanació que ajuden a l'usuari a explorar i descobrir continguts que els puguin agradar. Resumen: Actualmente el consumo de música es sesgada hacia algunos artistas muy populares. Por ejemplo, en el año 2007 solo el 1% de todas las canciones en formato digital representó el 80% de las ventas. De la misma manera, solo 1.000 álbumes representaron el 50% de las ventas y el 80% de todos los álbumes vendidos se compraron menos de 100 veces. Es claro que hay una necesidad de ayudar a las personas a filtrar, descubrir, personalizar y recomendar música a partir de la enorme cantidad de contenido musical disponible. Los algoritmos de recomendación de música actualmente intentan predecir con precisión lo que los usuarios demandan escuchar. Sin embargo, a menudo estos algoritmos tienden a recomendar artistas famosos o conocidos de antemano para el usuario. Esto hace que disminuya la eficiencia y la utilidad de las recomendaciones, ya que estos algoritmos se centran básicamente en mejorar la precisión de las recomendaciones sin tener en cuenta que los usuarios puedan escuchar o comprar independientemente de cuantos títulos sean las recomendaciones generadas. En esta tesis, destacamos la importancia que el usuario valora las recomendaciones recibidas. Por esta razón, modelamos la curva de popularidad de los artistas para poder recomendar música interesante y desconocida para el usuario. Las principales contribuciones de esta tesis son: i) un nuevo enfoque basado en el análisis de redes complejas y la popularidad de los productos aplicada a los sistemas de recomendación; ii) una evaluación centrada en el usuario que mide la importancia y la desconocencia de las recomendaciones; y iii) dos prototipos que implementan las ideas derivadas de la tarea teórica. Los resultados obtenidos tienen una clara implicación para aquellos sistemas de recomendación que ayudan al usuario a explorar y descubrir contenidos que les puedan agradar. *Computer Music Modeling and Retrieval*, 2004. *ISMIR 2007*.
