Tecumseh Fitch, 2010-04-01 Language more than anything else is what makes us human It appears that no communication system of equivalent power exists elsewhere in the animal kingdom Any normal human child will learn a language based on rather sparse data in the surrounding world while even the brightest

chimpanzee exposed to the same environment will not. Why not? How and why did language evolve in our species and not in others? Since Darwin's theory of evolution, questions about the origin of language have generated a rapidly growing scientific literature stretched across a number of disciplines, much of it directed at specialist audiences. The diversity of perspectives from linguistics, anthropology, speech science, genetics, neuroscience, and evolutionary biology can be bewildering. Tecumseh Fitch cuts through this vast literature, bringing together its most important insights to explore one of the biggest unsolved puzzles of human history.

Musical Beginnings Irène Deliège, John A. Sloboda, 1996. From where and by what mechanisms does an individual's musical ability originate? This is a subject of major interest both to developmental and music psychologists, heightened by the recent research into prenatal perception of sound. This timely volume brings together authoritative reviews on central issues, beginning with prenatal auditory experience through infancy and early childhood. The chapters chart the developmental progress with reference to the child's changing environment from the uterus through the intense and semi-exclusive mother-baby bond to the wider contexts provided by the family, school, and society at large. The book provides the most up-to-date integration of developmental and music psychology.

The Oxford Handbook of Music Psychology Susan Hallam, Ian Cross, Michael Thaut, 2009. A Million Years of Music Gary Tomlinson, 2015-03-06. A new narrative for the emergence of human music, drawing from archaeology, cognitive science, linguistics, and evolutionary theory. What is the origin of music? In the last few decades, this centuries-old puzzle has been reinvigorated by new archaeological evidence and developments in the fields of cognitive science, linguistics, and evolutionary theory. In this path-breaking book, renowned musicologist Gary Tomlinson draws from these areas to construct a new narrative for the emergence of human music. Starting at a period of human prehistory long before Homo sapiens or music existed, Tomlinson describes the incremental attainments that by changing the communication and society of prehuman species laid the foundation for musical behaviors in more recent times. He traces in Neandertals and early sapiens the accumulation and development of these capacities, and he details their coalescence into modern musical behavior across the last hundred millennia. But *A Million Years of Music* is not about music alone. Tomlinson builds a model of human evolution that revises our understanding of the interaction of biology and culture across evolutionary time scales, challenging and enriching current models of our deep history. As he tells his story, he draws in other emerging human traits: language, symbolism, a metaphysical imagination, and the ritual it gives rise to, complex social structure, and the use of advanced technologies. Tomlinson's model of evolution allows him to account for much of what makes us a unique species in the world today and provides a new way of understanding the appearance of humanity in its
