Each question includes detailed explanations and real world examples to enhance learning and exam readiness. Perfect for network engineers and Linux system administrators. LPIC2 Linux Networking Network Professional System Administration Routing Firewall Configuration Security Exam Preparation Tech Certifications ITCertifications Troubleshooting Career Growth Linux Skills Certification Guide IT Administration **Linux Networking Cookbook** Gregory Boyce, 2016-06-29 Over 40 recipes to help you set up and configure Linux networks. About This Book Move beyond the basics of how a Linux machine works and gain a better understanding of Linux networks and their configuration. Impress your peers by setting up and configuring a Linux server and its various network elements like a pro. This is a hands on solution guide to building, maintaining, and securing a network using Linux. Who This Book Is For This book is targeted at Linux systems administrators who have a good basic understanding and some prior experience of how a Linux machine operates but want to better understand how various network services function. How to set them up and how to secure them. You should be familiar with how to set up a Linux server and how to install additional software on them. What You Will Learn Route an IPv6 netblock to your local network. Modify your named instance to support setting hostnames for your IPv6 addresses. Use SSH for remote console access. Configure NGINX with TLS. Secure XMPP with TLS. Leverage iptables6 to firewall your IPv6 traffic. Configure Samba as an Active Directory compatible directory service. In Detail Linux can be configured as a networked workstation, a DNS server, a mail server, a firewall, a gateway, a router, and many other things. These are all part of administration tasks, hence network administration is one of the main tasks of Linux system administration. By knowing how to configure system network interfaces in a reliable and optimal manner, Linux administrators can deploy and configure several network services including file, web, mail, and servers while working in large enterprise environments. Starting with a simple Linux router that passes traffic between two private networks, you will see how to enable NAT on the router in order to allow Internet access from the network and will also enable DHCP on the network to ease configuration of client systems. You will then move on to configuring your own DNS server on your local network using bind9 and tying it into your DHCP server to allow automatic configuration of local hostnames. You will then future enable your network by setting up IPv6 via tunnel providers. Moving on, we'll configure Samba to centralize authentication for your network services. We will also configure Linux client to leverage it for authentication and set up a RADIUS server that uses the directory server for authentication. Toward the end, you will have a network with a number of services running on it and will implement monitoring in order to detect problems as they occur. Style and approach This book is packed with practical recipes and a task based approach that will walk you through building, maintaining, and securing a computer network using Linux. *Linux Networking Cookbook* Carla Schroder, 2007-11-26 This soup to nuts collection of recipes covers everything you need to know to perform your job as a Linux network administrator.

whether you're new to the job or have years of experience. With *Linux Networking Cookbook* you'll dive straight into the gnarly hands-on work of building and maintaining a computer network. Running a network doesn't mean you have all the answers. Networking is a complex subject with reams of reference material that's difficult to keep straight, much less remember. If you want a book that lays out the steps for specific tasks that clearly explains the commands and configurations and does not tax your patience with endless ramblings and meanderings into theory and obscure RFCs, this is the book for you. You will find recipes for Building a gateway firewall and wireless access point on a Linux network; Building a VoIP server with Asterisk; Secure remote administration with SSH; Building secure VPNs with OpenVPN and a Linux PPTP VPN server; Single sign on with Samba for mixed Linux/Windows LANs; Centralized network directory with OpenLDAP; Network monitoring with Nagios or MRTG; Getting acquainted with IPv6; Setting up hands-free networks; installations of new systems; Linux system administration via serial console; And a lot more. Each recipe includes a clear, hands-on solution with tested code plus a discussion on why it works. When you need to solve a network problem without delay and don't have the time or patience to comb through reference books or the Web for answers, *Linux Networking Cookbook* gives you exactly what you need.

**Linux Network Administrator's Guide** Olaf Kirch, Terry Dawson, 2000 This introduction to networking on Linux now covers firewalls including the use of ipchains and Netfilter; masquerading and accounting.
