## **Nucleic Acids Structures Properties And Functions:**

**Nucleic Acids** Victor A. Bloomfield, Donald M. Crothers, Ignacio Tinoco, 2000-04-17 Providing a comprehensive account of the structures and physical chemistry properties of nucleic acids with special emphasis on biological function this text has been organized to meet the needs of those who have only a basic understanding of physical chemistry and molecular biology

**Nucleic Acid Structure and Recognition** Stephen Neidle, 2002 This book provides a detailed view of the molecular structures of DNA and RNA and how they are recognised by small molecules and proteins Extensive source material is provided including information on relevant web sites and computer programmes The major methods of structural investigation for nucleic acids X ray crystallography NMR and molecular modelling are reviewed and their scope and limitations in the context of nucleic acids discussed Also covered are the conformational features of nucleic acid building blocks including a description of how base pair morphologies are analysed the structures of DNA double helices and helical oligonucleotides emphasising current ideas on sequence dependent structure and DNA DNA interactions including triplexes and quadruplexes The principles of RNA folding ribosome and ribozyme structure are also surveyed Both covalent and non covalent nucleic acid interactions with small molecules are described with the emphasis on recognition principles and sequence specific gene recognition The principles of protein nucleic acid are covered focussing on regulatory proteins Nucleic Acid Structure and Recognition will therefore equip readers with a good understanding of all the important aspects of this major field The Nucleic Acid Database NDB crystallographic and NMR structures for the nucleic acid structures described in the book are freely available through the Nucleic Acid Structure and Recognition website

**Nucleic Acids: Structures, Properties and Functions** Becky Orton, 2022-09-13 Nucleic acids are biopolymers or large biomolecules composed of organic molecules called nucleotides They are essential to all known forms of life Deoxyribonucleic acid DNA and ribonucleic acid RNA are the two main classes of nucleic acids If the sugar is ribose the polymer is RNA In case the sugar is the ribose derivative deoxyribose then the polymer is DNA Nucleic acids are naturally occurring chemical compounds that act as the primary information carrying molecules in cells and make up the genetic material The information of every living cell of every life form on Earth is created encoded and stored by nucleic acids In turn they function to transfer and convey that information inside and outside the cell nucleus to the internal operations of the cell and ultimately to the next generation of each living organism This book unravels the recent studies in the field of nucleic acids It presents researches and studies performed by experts across the globe Researchers and students in this field will be assisted by this book

**Informational Biopolymers of Genes and Gene Expression** R.D. Blake, 2005-03-23 This new text examines the biophysics and biochemistry of nucleic acids and proteins carving out the dynamic interface between chemistry and molecular biology and providing a detailed picture of nucleic acids and proteins their structures biological properties and origins and evolution Full of novel insights informed by years of research and teaching R D Blake has written a new text that

examines the biophysics and biochemistry of nucleic acids and proteins This book carves out the dynamic interface between chemistry and molecular biology and provides a detailed picture of nucleic acids and proteins their structures biological properties and origins and evolution While pitched at a level that is accessible to upper level undergraduate students of biology the book will likewise be of keen interest to researchers and graduate students in biology chemistry and the physical sciences A broad range of topics accompanied with extensive references footnotes boxed asides chapter ending problems and detailed illustrations throughout combine to make this an ideal choice for courses on advanced biochemistry physical biochemistry nucleic acids and proteins biophysics and biochemistry molecular evolution and protein nucleic acid interactions

*Nucleic Acids*, 1965 Principles of Nucleic Acid Structure Wolfram Saenger, 2013-12-01 New textbooks at all levels of chemistry appear with great regularity Some fields like basic biochemistry organic reaction mechanisms and chemical thermodynamics are well represented by many excellent texts and new or revised editions are published sufficiently often to keep up with progress in research However some areas of chemistry especially many of those taught at the graduate level suffer from a real lack of up to date textbooks The most serious needs occur in fields that are rapidly changing Textbooks in these subjects usually have to be written by scientists actually involved in the research which is advancing the field It is not often easy to persuade such individuals to set time aside to help spread the knowledge they have accumulated Our goal in this series is to pinpoint areas of chemistry where recent progress has outpaced what is covered in any available textbooks and then seek out and persuade experts in these fields to produce relatively concise but instructive introductions to their fields These should serve the needs of one semester or one quarter graduate courses in chemistry and biochemistry In some cases the availability of texts in active research areas should help stimulate the creation of new courses
