Nonlocal Integral Equation Continuum Models Marta D'Elia ,Max Gunzburger ,Christian Vollmann,2024-09-12 The book presents the state of the art of nonlocal modeling and discretization and provides a practical introduction to nonlocal modeling for readers who are not familiar with such models

These models have recently become a viable alternative to classical partial differential equations when the latter are unable to capture effects such as discontinuities and multiscale behavior in a system of interest. Because of their integral nature, nonlocal operators allow for the relaxation of regularity requirements on the solution and thus allow for the capture of multiscale effects, the result of which is their successful use in many scientific and engineering applications. The book also provides a thorough analysis and numerical treatment of nonstandard nonlocal models focusing on both well known and nonstandard interaction neighborhoods. In addition, the book delivers an extensive practical treatment of the implementation of discretization strategies via finite element methods. Numerous figures are provided as concrete examples to illustrate both the analytic and computational results.

Nonlocal Integral Equation Continuum Models: Nonstandard Interaction Neighborhoods and Finite Element Discretizations is intended for mathematical and application researchers interested in alternatives to using partial differential equation models that better describe the phenomena they are interested in. The book will also be of use to computational scientists and engineers who need to make sense of how to use available software, improve existing software, or develop new software tailored to their application interests.

Evolutionary Algorithms in Engineering and Computer Science K. Miettinen, 1999-07-09. Evolutionary Algorithms in Engineering and Computer Science. Edited by K. Miettinen. University of Jyväskylä, Finland. M. M. Mäkelä. University of Jyväskylä, Finland. P. Neittaanmäki. University of Jyväskylä, Finland. J. P. Riaux. Dassault Aviation, France. What is Evolutionary Computing? Based on the genetic message encoded in DNA and digitalized algorithms inspired by the Darwinian framework of evolution by natural selection. Evolutionary Computing is one of the most important information technologies of our times. Evolutionary algorithms encompass all adaptive and computational models of natural evolutionary systems: genetic algorithms, evolution strategies, evolutionary programming, and genetic programming. In addition, they work well in the search for global solutions to optimization problems, allowing the production of optimization software that is robust and easy to implement. Furthermore, these algorithms can easily be hybridized with traditional optimization techniques. This book presents state-of-the-art lectures delivered by international academic and industrial experts in the field of evolutionary computing. It bridges artificial intelligence and scientific computing with a particular emphasis on real-life problems encountered in application-oriented sectors such as aerospace, electronics, telecommunications, energy, and economics. This rapidly growing field, with its deep understanding and assessment of complex problems in current practice, provides an effective modern engineering tool. This book will therefore be of significant interest and value to all postgraduates, research scientists, and practitioners facing complex optimization problems.
