The 39 chapters are authored by international leaders of their fields **Microwave-enhanced Chemistry** Howard M. Kingston, Stephen John Haswell, 1997 This book is an indication of the breadth of microwave enhanced chemistry as a new branch of chemical science. Microwave radiation can be used in many fields of chemistry in addition to sample preparation, decomposition and extraction. It is now commonly used in the synthesis of organic organometallic and inorganic compounds or catalysts. Microwave assisted sample preparation has become a standard method in thousands of analytical chemical laboratories and many other chemical manipulations are in the process of standardizing procedures that depend on microwave technology. This book will be helpful to many chemists around the world because it has been constructed to be an international reference text **Comprehensive Analytical Chemistry** Cecil Leeburn Wilson, David Woodburn Wilson, 2008

As such the handbook continues to provide detailed information on the environmental metals that influence the health of plants, animals and humans with particular attention given to environmental and analytical chemistry, bioavailability, metabolic pathways and biological effects. It also delineates the problems related to waste soils and wildlife as well as the risks caused by the increasing output of metals from industry and households. It retains the proven features of the first edition such as the extensive bibliography, numerous tables with useful data and a glossary of terms and once again all the contributions were not only written but also reviewed by acknowledged and experienced experts. In total international experts from 15 countries have pooled their knowledge and experience to create this ultimate resource.
