Health Professions Education at a Time of Triple Planetary Crises Lynn Valerie Monrouxe, Jacqueline G. Bloomfield, Michelle McLean, Komal Atta, Fathima Rizka Ihsan, 2025-12-05 While climate change has been described as the greatest threat to health in the 21st century with the potential to reverse 50 years of health gains we are currently facing a triple planetary crisis In addition to a changing climate rising land and ocean temperatures are changing weather patterns resulting in wildfires floods and melting polar regions the latter leading to rising sea levels Through our largely unsustainable activities pollution in all of its forms air heavy metals microplastics forever chemicals etc is impacting not only humans but also other planetary beings As a result of climate change and pollution our declining ecosystem health is leading to extensive biodiversity loss In 2023 we now find ourselves living beyond the safe operating space for six of nine planetary boundaries Planetary justice describes the inequitable intergenerational impacts of these planetary crises not just for humans but for all of Earth's inhabitants Considering these pressing health and ecological issues it is imperative that health professions education prepares graduates to practice sustainable healthcare do no harm and to respond to emergencies such as smoke inhalation burns and eco anxiety Health professions education

therefore needs to prepare graduates to be planetary stewards and eco ethical leaders to ensure more equitable access to our planet's limited resources for current and future generations. This will require more sustainable lifestyles and professional practice and in many instances it may involve ecosystem restoration. The 2030 United Nations Sustainable Development Goals (Global Goals) provide considerable guidance in terms of sustainable development for current and future generations while Indigenous ways of knowing, doing and being which have frequently been marginalised and dismissed offer strength based approaches to living in harmony and caring for ecosystems and all of the planet's inhabitants. This Research Topic is seeking innovative contributions in health professions education that prepare graduates to not only work on a changing planet but to also take action as planetary citizens, planetary stewards and eco ethical leaders. Submissions should provide sufficient detail and where possible measurable outcomes such that others may be able to adapt the program or intervention at their own institutions. *Cyberhound's Guide to Companies on the Internet* Gale Group, Wendy H.

Words on Cassette, 2002 R R Bowker Publishing, 2002. *Data-Based Radiation Oncology - Design of Clinical Trials* Kerstin A. Kessel, Anne W. Lee, Søren M. Bentzen, Bhadrashain Vikram, Fridtjof Nüeschlin, Stephanie E. Combs, 2018-04-12. In radiation oncology as in many other specialties clinical trials are essential to investigate new therapy approaches. Usually preparation for a prospective clinical trial is extremely time consuming until ethics approval is obtained. To test a new treatment usually many years pass before it can be implemented in the routine care. During that time already new interventions emerge, new drugs appear on the market, technical/physical innovations are being implemented, novel biology driven concepts are translated into clinical approaches while we are still investigating the ones from years ago. Another problem is associated with molecular diagnostics and the growing amount of tumor specific biomarkers which allows for a better stratification of patient subgroups. On the other side this may result in a much longer time for patient recruiting and consequently in larger multicenter trials. Moreover all of the relevant data must be readily available for treatment decision making, treatment as well as follow up and ultimately for trial evaluation. This challenges even more for agreed standards in data acquisition, quality and management. How could we change the way currently clinical trials are performed in a way they are safe and ethically justifiable and speed up the initiation process so we can provide new and better treatments faster for our patients? Further while we rely on various quantitative information handling distributed large heterogeneous amounts of data efficiently is very important. Thus data management becomes a strong focus. A good infrastructure helps to plan, tailor

and conduct clinical trials in a way they are easy and quickly analyzable In this research topic we want to discuss new ideas for intelligent trial designs and concepts for data management **Tableau 9: The Official Guide** George Peck,2015-10-22 Master the powerful tools and features of Tableau 9 Deliver meaningful BI visualizations and real time dashboards to users across your organization quickly and easily Written by an experienced author and certified trainer Tableau 9 The Official Guide offers step by step instruction best practices examples and downloadable video tutorials See how to get up and running on Tableau load data drag and drop components add graphics and maps create complex calculations and distribute dynamic dashboards and stories This practical book teaches how to work with Tableau Server write custom programs and publish your results to the Web Connect to data from different systems spreadsheets and databases Use pre defined visualizations sample workbooks and Show Me Analyze with graphs charts tables and statistics Create advanced calculations including new level of detail expressions Add geographic analysis and Internet provided background maps Combine multiple visualizations into dynamic dashboards and stories Export to the Web and to other file formats using Tableau Server Online and Public Develop custom programs with JavaScript REST and Tableau Data Extract APIs Electronic content includes Videos that demonstrate the techniques presented in the book Sample Tableau workbooks Complete formula language reference
