V Ray Settings This page provides a tutorial on universal settings for V Ray that work for most still images Overview The universal settings comprise a set of settings that work very well for still images in many situations and are the default for V Ray Next Please note that these settings are not optimal in the sense that with enough tweaking you can probably get similar quality with faster render times The beauty of these settings though is that they require almost no tweaking and you are guaranteed to get a good result in the end The advantages of these settings are o very little parameters for controlling render quality vs speed o works for a very large number of scenes o produces high quality results With the Progressive Image Sampler the default Render time min is set to 1 0 which might be insufficient for some scenes You can reset this to 0 0 min and rendering will continue until the Noise threshold is reached Setting the V Ray Renderer 1 Set V Ray as the current rendering engine with the default V Ray settings 2 The default settings are optimized to work universally so it is recommended to keep them Progressive image sampler with 100 Max subdivs and 1 Min subdivs GI enabled using Brute Force as Primary GI engine and Light Cache as Secondary GI engine 3 You can further refine the noise levels from the Progressive Image sampler rollout by adjusting the Noise Threshold and placing a 0 value for the Render time min 4 You can control the amount of AA vs shading samples for materials lights GI using the Min shading rate parameter in the Image Sampler rollout but the default value is optimised to work well for the majority of scenes   *Build a Large Language Model (From Scratch)* Sebastian Raschka,2024-10-29 Learn how to create train and tweak large language models LLMs by building one from the ground up In Build a Large Language Model from Scratch bestselling author Sebastian Raschka guides you step by step through creating your own LLM Each stage is explained with clear text diagrams and examples You ll go from the initial design and creation to pretraining on a general corpus and on to fine tuning for specific tasks Build a Large Language Model from Scratch teaches you how to Plan and code all the parts of an LLM Prepare a dataset suitable for LLM training Fine tune LLMs for text classification and with your own data Use human feedback to ensure your LLM follows instructions Load pretrained weights into an LLM Build a Large Language Model from Scratch takes you inside the AI black box to tinker with the internal systems that power generative AI As you work through each key stage of LLM creation you ll develop an in depth understanding of how LLMs work their limitations and their customization methods Your LLM can be developed on an ordinary laptop and used as your own personal assistant About the technology Physicist Richard P Feynman reportedly said I don t understand anything I can t build Based on this same powerful principle bestselling author Sebastian Raschka guides you step by step as you build a GPT style LLM that you can run on your laptop This is an engaging book that covers each stage of the process from planning and coding to training and fine tuning About the book Build a Large Language Model From Scratch is a practical and eminently satisfying hands on journey into the foundations of generative AI Without relying on any existing LLM libraries you ll code a base model evolve it into a text classifier and ultimately create a chatbot that can follow your conversational instructions And you ll really understand it because you built it yourself What s inside Plan and
