 peculiar and the downright nutty Winner of the IgNobel Prize in physics and the 2004 American Institute of Physics Science

 Doughnut* In this new work he reveals that science sometimes takes a path through the ridiculous and the bizarre to discover
 that Nature often simply does not follow common sense One experiment involving a bed platform scales and a dying man
 seemed to prove that the soul weighed the same as a slice of bread But other no less fanciful experiments and ideas led to
 the fundamentals of our understanding of movement heat light and energy and such things as the discovery of electricity and
 the structure of DNA improved engines and the invention of computers As in his previous book Fisher uses personal stories
 and examples from everyday life as well as humor to make the science accessible He touches on topics from lightning to
 corsets and from alchemy to Frankenstein and water babies but he may not claim the last word on the weight of the soul
