

- There is a new window **Payment Method Category** to define the categories, for example Credit Cards, Vouchers, etc. So first the user needs to enter the categories to be used.
- In **POS Terminal Type** window the user can assign these categories to any of the payments. Apart from this it is possible to add an image to the payment method.
- For example if Credit Card category is created and assigned to VISA and AMEX payment methods instead of having two buttons (VISA, AMEX) there will be just one (Credit Card).
- Click the button **Credit Card** and a popup will be opened. Select the payment method.
- A message warns the user which payment method is selected.

Overpayment

An overpayment is a situation where the amount paid by the customer exceeds the expected amount and the difference cannot be given back fully in cash to the customer. This situation typically occurs when payment methods other than cash are used such as vouchers or a combination of cash and voucher. An example:

- Expected amount is 12.50
- Customer uses 3 vouchers of 4.50 each = 13.50
- Overpayment is 1.00 because no change can be given back.

When there is an overpayments situation, it will be shown in the message area. In the Cash Up process the report shows overpayments in case they are greater than zero. Cash, by definition, cannot have overpayments. In case more cash is available than was registered, there will be a cash difference situation, that is also registered in the Cash Up process. An overpayment in the back office shows a summed lines amount in the Payment In Plan than the total gross amount in the header.

A payment method can be configured to allow overpayments or not, therefore an overpayment limit can be defined. In case that overpayment limit is exceeded then "Overpayment exceeded limit" message will be shown.

Using the Cash Pad

To quickly enter bills and coins denominations the bills & coins pad can be used. It shows localized cuts that represent commonly used localized cuts. This can save the operator time by reducing the amount of tap / clicks and reduces human error. For a customer that hands over one 100 and one 50 bill, the shop assistant only needs to tap to buttons before change can be given and there is no need for mental arithmetic. You can switch between the regular numerical pad and the bills & coins tap by tapping the bottom left toggle button that shows currency symbols.
