Enterprise Systems Integration Diogo R. Ferreira, 2013-12-04 The field of enterprise systems integration is constantly evolving as every new technology that is introduced appears to make all previous ones obsolete Despite this continuous evolution there is a set of underlying concepts and technologies that have been gaining an increasing importance in this field Examples are asynchronous messaging through message queues data and application adapters based on XML and Web services the principles associated with the service oriented architecture SOA service composition orchestrations and advanced mechanisms such as correlations and long running transactions Today these concepts have reached a significant level of maturity and they represent the foundation over which most integration platforms have been built This book addresses integration with a view towards supporting business processes From messaging systems to data and application adapters and then to services orchestrations and choreographies the focus is placed on the connection between systems and business processes and particularly on how it is possible to develop an integrated application infrastructure in order to implement the desired business processes For this purpose the text follows a layered bottom up approach with application oriented integration at the lowest level followed by service oriented integration and finally completed by process oriented integration at the topmost level The presentation of concepts is accompanied by a set of instructive examples using state of the art technologies such as Java Message Service JMS Microsoft Message Queuing MSMQ Web Services Microsoft BizTalk Server and the Business Process Execution Language BPEL The book is intended as a textbook for advance undergraduate or beginning graduate students in computer science especially for those in an

information systems curriculum IT professionals with a background in programming databases and XML will also benefit from the step by step description of the various integration levels and the related implementation examples

Handbook of Research on ePortfolios Jafari, Ali, Kaufman, Catherine, 2006-05-31 This handbook investigates a variety of ePortfolio uses through case studies the technology that supports the case studies and it also explains the conceptual thinking behind current uses as well as potential uses Provided by publisher

End-User Development Volkmar Pipek, Mary-Beth Rosson, Volker Wulf, 2009-02-27 Work practices and organizational processes vary widely and evolve constantly The technological infrastructure has to follow allowing or even supporting these changes Traditional approaches to software engineering reach their limits whenever the full spectrum of user requirements cannot be anticipated or the frequency of changes makes software reengineering cycles too clumsy to address all the needs of a specific field of application Moreover the increasing importance of infrastructural aspects particularly the mutual dependencies between technologies usages and domain competencies calls for a differentiation of roles beyond the classical user designer dichotomy End user development EUD addresses these issues by offering lightweight use time support which allows users to configure adapt and evolve their software by themselves EUD is understood as a set of methods techniques and tools that allow users of software systems who are acting as non professional software developers to 1 create modify or extend a software artifact While programming activities by non professional actors are an essential focus EUD also investigates related activities such as collective understanding and sense making of use problems and solutions the interaction among end users with regard to the introduction and diffusion of new configurations or delegation patterns that may also partly involve professional designers
