Due to the increasing size of the hardcopy publication, the current edition has been divided into two volumes to make it easier to handle and consult. Volume 1, Background Resources and Tools, arranged in 5 parts, begins with chapters on the science of toxicology, its history, and informatics framework in Part 1. Part 2 continues with chapters organized by more specific subject such as cancer, clinical toxicology, genetic toxicology, etc. The categorization of chapters by resource format, for example, journals and newsletters, technical reports, organizations, constitutes Part 3. Part 4 further considers toxicology's presence via the Internet, databases, and software tools. Among the miscellaneous topics in the concluding Part 5 are laws and regulations, professional education, grants and funding, and patents. Volume 2, The Global Arena, offers contributed chapters focusing on the toxicology contributions of over 40 countries, followed by a glossary of toxicological terms and an appendix of popular quotations related to the field. The book, offered in both print and electronic formats, is carefully structured, indexed, and cross-referenced to enable users to easily find answers to their questions or serendipitously locate useful knowledge they were not originally aware they needed. Among the many timely topics receiving increased emphasis are disaster preparedness, nanotechnology, omics, risk assessment, societal implications such as ethics, and the precautionary principle, climate change, and children's environmental health. Introductory chapters provide a backdrop to the science of toxicology, its history, the origin and status of toxicoinformatics, and starting points for identifying resources. Offers an extensive array of chapters organized by subject, each highlighting resources such as journals, databases, organizations, and review articles. Includes chapters with an emphasis on format such as government reports, general interest publications, blogs, and audiovisuals. Explores recent Internet trends, web-based databases, and software tools in a section on the online environment. Concludes with a miscellany of special topics such as laws and regulations, chemical hazard communication, resources, careers, and professional education. K-12 resources, funding, poison control centers, and patents. Paired with Volume Two, which focuses on global resources, this set offers the most comprehensive compendium of print, digital, and organizational resources in the toxicological sciences, with over 120 chapters, contributions by experts and leaders in the field.

Intellectual Property Rights

and Competition in Standard Setting Valerio Torti, 2015-10-05. Competition and intellectual property rights (IPRs) are both necessary for a market to work efficiently and to promote consumer welfare. Properly applied intellectual property rules define a legal framework which allows undertakings to profit from their inventions. This in turn encourages competition among firms and enhances dynamic efficiency to the benefit of consumer welfare. Standard setting represents one of the fields where the interaction between competition law and IPRs clearly comes to light. The collaborative goal of standard setting organizations (SSOs) is to adopt and promote standards that either do not conflict with anyone's right or, if they do, are developed under condition that patents are licensed under defined terms. This book examines the tension between IPRs and

competition in the standard setting field which can arise when innovators over exploit the rights they have been granted and hold up an entire industry The book compares EU and U S jurisdictions with a particular focus on the IT and telecommunication sectors It scrutinizes those practices which could harm standard setting and its goals looking at misleading conducts by SSOs members which may lead to breach the EU and U S antitrust provisions on abuse of market power Recent developments in EU and U S standard setting are analysed highlighting the differences in enforcement approaches The book considers how the optimal balance between IPRs and industry standards can be struck suggesting a policy model which takes into account both innovators interests and SSOs goals The Cumulative Book Index ,1999
