Remote Sensing Digital Image Analysis John A. Richards, 2022-01-06 Remote Sensing Digital Image Analysis provides a comprehensive treatment of the methods used for the processing and interpretation of remotely sensed image data. Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery even though many of the fundamentals have substantially remained the same. As with its predecessors this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing. The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing. The presentation level is for the mathematical non specialist. Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background. The chapters progress logically through means for the acquisition of remote sensing images, techniques by which they can be corrected and methods for their interpretation. The prime focus is on applications of the methods so that worked examples are included and a set of problems conclude each chapter.

**Deep Learning for Natural Language Processing** Mihai Surdeanu, Marco Antonio Valenzuela-Escárcega, 2024-02-08 Deep Learning is becoming increasingly important in a technology dominated world However the building of computational models that accurately represent linguistic structures is complex as it involves an in depth knowledge of neural networks and the understanding of advanced mathematical concepts such as calculus and statistics This book makes these complexities accessible to those from a humanities and social sciences background by providing a clear introduction to deep learning for natural language processing It covers both theoretical and practical aspects and assumes minimal knowledge of machine learning explaining

the theory behind natural language in an easy to read way It includes pseudo code for the simpler algorithms discussed and actual Python code for the more complicated architectures using modern deep learning libraries such as PyTorch and Hugging Face Providing the necessary theoretical foundation and practical tools this book will enable readers to immediately begin building real world practical natural language processing systems
