**Extremes and Recurrence in Dynamical Systems** Valerio Lucarini,Davide Faranda,Ana Cristina Gomes Monteiro Moreira de Freitas,Jorge Miguel Milhazes de Freitas,Mark Holland,Tobias Kuna,Matthew Nicol,Mike Todd,Sandro

Vaienti,2016-04-25 Written by a team of international experts Extremes and Recurrence in Dynamical Systems presents a unique point of view on the mathematical theory of extremes and on its applications in the natural and social sciences. Featuring an interdisciplinary approach to new concepts in pure and applied mathematical research the book skillfully combines the areas of statistical mechanics probability theory measure theory dynamical systems statistical inference geophysics and software application. Emphasizing the statistical mechanical point of view the book introduces robust theoretical embedding for the application of extreme value theory in dynamical systems. Extremes and Recurrence in Dynamical Systems also features A careful examination of how a dynamical system can serve as a generator of stochastic processes. Discussions on the applications of statistical inference in the theoretical and heuristic use of extremes. Several examples of analysis of extremes in a physical and geophysical context. A final summary of the main results presented along with a guide to future research projects. An appendix with software in Matlab programming language to help readers to develop further understanding of the presented concepts. Extremes and Recurrence in Dynamical Systems is ideal for academics and practitioners in pure and applied mathematics probability theory statistics chaos theoretical and applied dynamical systems statistical mechanics geophysical fluid dynamics geosciences and complexity science.
