## **Elementary Science Methods**

Andrew Martin,David Jerner Martin,2002-07 This popular text is the first science methods book to truly practice what it preaches using a constructivist approach to guide students in learning how to teach in a constructivist manner The text includes a wealth of open ended inquiry activities such as Constructing Your Ideas for students to complete in class These activities help students to construct their own personal conceptualizations about teaching science in the elementary school This text also features over 170 process oriented activities for children including Constructing Science in the Classroom and In the Schools each keyed to grade levels and each open ended so teachers can encourage children to develop and perform their own investigations All activities are linked to National Science Education Standards for appropriate content

professional development assessment and teaching and the activities contain suggestions of appropriate accompanying children s literature Martin s text takes the approach that it is more important for children to learn how to do science than it is for them to learn about science Children learn how to do science by mastering the scientific processes and applying them in inquiries into scientific questions Employing the constructivist approach teachers help children form personally constructed meanings from their own experience and thought The text is predicated on the reality that teachers of elementary science do not need to know a great deal of science to be good science teachers but need to be co inquirers with their students

Issues and Challenges in Science Education Research Kim Chwee Daniel Tan, Mijung Kim, 2012-04-27 In contemporary society science constitutes a significant part of human life in that it impacts on how people experience and understand the world and themselves. The rapid advances in science and technology newly established societal and cultural norms and values and changes in the climate and environment as well as the depletion of natural resources all greatly impact the lives of children and youths and hence their ways of learning viewing the world experiencing phenomena around them and interacting with others. These changes challenge science educators to rethink the epistemology and pedagogy in science classrooms today as the practice of science education needs to be proactive and relevant to students and prepare them for life in the present and in the future. Featuring contributions from highly experienced and celebrated science educators as well as research perspectives from Europe the USA Asia and Australia this book addresses theoretical and practical examples in science education that on the one hand plays a key role in our understanding of the world and yet paradoxically now acknowledges a growing number of uncertainties of knowledge about the world. The material is in four sections that cover the learning and teaching of science from science literacy to multiple representations science teacher education the use of innovations and new technologies in science teaching and learning and science learning in informal settings including outdoor environmental learning activities. Acknowledging the issues and challenges in science education this book hopes to generate collaborative discussions among scholars researchers and educators to develop critical and creative ways of science teaching to improve and enrich the lives of our children and youths.
