

Methyl Bromide: The Green's Enemy

Greenhouse gases (GHGs) are pollutants resulting from human activities that cause global warming and sea level rise. One of the most significant GHGs is carbon dioxide (CO₂), which is released into the atmosphere through the burning of fossil fuels. Other major GHGs include methane (CH₄), nitrous oxide (N₂O), and fluorinated gases (F-gases). F-gases are synthetic compounds that are used in a variety of industrial processes, including the production of refrigerants, air conditioning, and foam blowing. F-gases are particularly concerning because they have a much higher global warming potential (GWP) than CO₂. For example, some F-gases have a GWP of 100 or more, meaning they can trap 100 or more times as much heat in the atmosphere as CO₂. The Kyoto Protocol, an international treaty signed in 1997, aimed to reduce the emissions of GHGs. However, the United States withdrew from the treaty in 2001, and many other countries have failed to meet their commitments. As a result, the concentration of GHGs in the atmosphere continues to rise, leading to more frequent and severe weather events, rising sea levels, and other impacts on the environment.

In this lab, you will study the chemical structure and properties of methyl bromide, a potent greenhouse gas. You will also learn about the environmental impacts of methyl bromide and the efforts to phase it out.

Objectives: Upon completion of this lab, you should be able to:

Describe the chemical structure and properties of methyl bromide.

Materials: 1. Methyl bromide (CH₃Br) 2. Hydrogen bromide (HBr)

Procedure:

1. Weigh a sample of methyl bromide (CH₃Br) and place it in a beaker. Measure the volume of the liquid (V_l). The density of methyl bromide is 2.97 g/mL. Calculate the mass of the liquid (m_l) using the formula: $m_l = V_l \times \text{density}$. Record the mass of the liquid in the table below.
2. Add a small amount of water to the beaker and stir. The liquid will become a colorless solution. Record the color of the solution in the table below.
3. Add a small amount of sodium hydroxide (NaOH) to the beaker and stir. The solution will become a colorless solution. Record the color of the solution in the table below.
