Microbial Biopesticides:

Microbial Biopesticides Opender Koul, G. S. Dhaliwal, 2001-10-25 Biotechnological research has provided key developments in pest control agents focusing on pathogens of insect pests as formulated biological pesticides. Emphasis has been placed on bacteria and viruses as they are well understood and easily manipulated. *Microbial Biopesticides* provides a comprehensive overview of the advances made in the use of b *Formulation of Microbial Biopesticides* H.D. Burges, 1998-10-31 Sound formulation is a vital aspect of microbial products used to protect plants from pests and diseases and to improve plant performance. *Formulation of Microbial Biopesticides* is an in depth treatment of this vitally important subject. Written by experts and carefully edited, this important title brings together a huge wealth of information for the first time within the covers of one book. The book is broadly divided into five sections covering principles of formulation, organisms with peroral and contact modes of action, organisms with the power of search and future trends. Each section contains comprehensive chapters written by internationally acknowledged experts in the areas covered. The book also includes three very useful appendices cataloguing formulation additives, spray application criteria and terminology. This outstanding book is a vitally important reference work for anyone involved in the formulation of microbial biopesticides and should find a place on the shelves of agriculture and plant scientists, microbiologists and entomologists working in academic and commercial agrochemical situations and in the libraries of all research establishments and companies where this exciting subject is researched, studied or taught. Microbial Products Mamtesh Singh, Gajendra Pratap Singh, Shivani Tyagi, 2022-11-16 *Microbial Products: Applications and Translational Trends* offers complete coverage of the production of microbial products including biopolymers, biofuels, bioactive compounds and their applications in fields such as bioremediation, agriculture, medicine and other industrial settings. This book focuses on multiple processes including upstream procedures and downstream processing and the tools required for their production. Lab scale development processes may not be as efficient when aiming for large scale industrial production so it is necessary to utilize in silico modeling tools for bioprocess design to ensure success at translational levels. Therefore, this book presents in silico and mathematical simulations and approaches used for such applications. Further, it examines microbial products produced from bacteria, fungi and algae. These major microbial categories have the capacity to produce various diverse secondary metabolites, bioactive compounds, enzymes, biopolymers, biofuels, probiotics and more. The bioproducts examined in the book are of great social, medical and agricultural benefit and include examples of biodegradable polymers, biofuels, biofertilizers and drug delivery agents. Presents approaches and tools that aid in the design of eco friendly, efficient and economic bioprocesses. Utilizes in silico and mathematical simulations for optimal bioprocess design. Examines approaches to be used for bioproducts from the lab scale to widely applied microbial biotechnologies. Presents the latest trends and technologies in the production approaches for microbial bio products manufacture and application. This book is ideal for both researchers and academics as it provides up to date

Microbial Biopesticides In India R. K. Murali Baskaran, P. K. Ghosh, 2022-11-14 According to estimates plant pests and diseases cause at least 10% of the world s food production to be lost Additional pest and disease losses occur after harvest where it is estimated that up to 13% of the total calories generated are lost after leaving the farm gate in addition to in field losses According to Indian viewpoints biotic stressors cause a 20 26% annual loss of food commodities The effects of the Green Revolution GV multiplied crop production and productivity which ultimately affected the livelihoods of Indian civilians However the introduction of numerous inorganic plant protection inputs resulted in irreversible harm to the environment human lives and material wealth The focus on environmentally friendly plant protection measures particularly microbial biopesticides has expanded as a result of current conditions and Indian government regulations on chemical pesticides that take into account their negative effects In the recent past India s biopesticide industries demand consumption market etc have grown tremendously It is expected that between 2040 and 2050 the biopesticide industry would either match or surpass those of chemical pesticides Global population growth is projected to reach 9 billion people by 2050 and the duty to increase food production by 70% of current levels in order to feed this population has led to a ruthless shift toward the use of artificial agricultural inputs Nevertheless there are ways to enhance food production to the anticipated level by using Integrated Pest Management which enables the prudent application of inorganic inputs in conjunction with environmentally benign tactics like microbial biopesticides
