Microbial Technologies In Advanced Biofuels Production:

Microbial Technologies in Advanced Biofuels Production Patrick C. Hallenbeck, 2011-12-16 Concerns over dwindling fossil fuel reserves and impending climate changes have focused attention worldwide on the need to discover alternative sustainable energy sources and fuels. Biofuels already produced on a massive industrial scale are seen as one answer to these problems. However, very real concerns over the effects of biofuel production on food supplies with some of the recent increases in worldwide food costs attributable to biofuel production have led to the realization that new non-food substrates for biofuel production must be bought online. This book is an authoritative, comprehensive, up-to-date review of the various options under development for the production of advanced biofuels as alternative energy sources. A general overview and introductory chapters for each section place the field in the context as well as provide essential basic notions for the more general reader. Accomplished internationally recognized experts carrying out research on individual focus areas contribute specific technical chapters detailing present progress and future prospects.

Biomass for Biofuels Katarzyna Bulkowska,Zygmunt Mariusz Gusiatin,Ewa Klimiuk,Artur Pawłowski,Tomasz Pokoj,2016-12-08 Biomass is a widely available resource that can be characterized by its high production potential Enabling the production of different types of biofuels biomass can be used in both spark ignition and compression ignition engines There is extensive knowledge of the biofuel production process and technologies enabling the production of biofuels with

high caloric value and better physicochemical properties are developed. The biggest barrier in the development of a biofuels market is not the lack of knowledge but economic and political aspects. Biomass for Biofuels presents technological aspects of biomass conversion into advanced biofuels. Also discussed are the influence of growing biofuels markets on the natural environment and social relations as well as economic aspects of acquisition of biomass and its processing into biofuels. In addition, biomass characteristics are presented. A definition is provided and its chemical composition and properties detailed. The focus is on lignocellulosic biomass whose complex structure is a limiting factor for biofuels production via biological processes. For that reason, mechanical, chemical, and physicochemical methods that enable an increased availability for the microorganisms used for biomass conversion to biofuels are discussed. **Advanced Biofuel Technologies** Deepak K.
