

# BACTERIOLOGY QUESTIONS

1

What are the major differences between Gram-positive and Gram-negative bacteria?

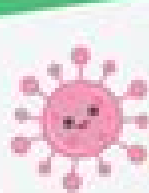

## ANSWER

The primary difference between Gram-positive and Gram-negative bacteria lies in the structure of their cell walls. Gram-positive bacteria have a thick peptidoglycan layer, while Gram-negative bacteria have an additional outer membrane and an additional outer membrane that affects the permeability of the cell wall. This structure allows Gram-negative bacteria to be more resistant to certain antibiotics and the pathogen.
