

Guidelines for the Provision of Nutrition Support Therapy in the Adult Critically Ill Patient: American Society for Parenteral and Enteral Nutrition

Guideline Questions, Evidence Grades, Recommendations, and Clinical Applications²

In the United States, there are currently about 80,000 adult intensive care hospital beds with an average of 75% capacity depending on region.¹ Most of these critically ill patients are unable to consume nutrition orally and artificial nutrition is often provided. The purpose of this guideline is to summarize the evidence within nutrition support to guide practitioners in their provision of artificial nutrition to critically ill patients. These key questions that had GRADE level evidence are presented with an evidence-based recommendation and clinical application discussion.² For questions not addressed in this guideline, follow the 2016 guidelines until a clinical recommendations paper is published.³

GUIDELINE QUESTION 1

In adult critically ill patients, does provision of higher versus lower energy intake impact clinical outcomes?

GRADE Recommendation: No significant difference in clinical outcomes was found between patients with higher vs. lower levels of energy intake. We suggest feeding between 12-25 kcal/kg (i.e., the range of mean energy intakes examined) in the first 7-10 days of ICU stay.

Evidence grade: Moderate

Strength of GRADE Recommendation: Weak

Discussion on Clinical Application for Question 1: Until data become available that enable more precise recommendations on energy intake, clinicians should rely on clinical judgment. When EN or PN is associated with problems in glycemic control, respiratory acidosis or high serum triglyceride concentrations, consider whether feedings should be reduced. Lipid-based sedation also provides a source of kcal that should be considered in the total daily intake. Gastrointestinal tolerance may limit how much EN can be provided. Feeding less than the EN formula volume needed to deliver Dietary Reference Intake levels may risk inadequate vitamin, mineral, and trace element intake.

GUIDELINE QUESTION 2

In adult critically ill patients, does provision of higher as compared to lower protein intake impact clinical outcomes?

GRADE Recommendation: There was no difference in clinical outcomes in the relatively limited data. Due to a paucity of trials with high-quality evidence, we cannot make a new recommendation at this time beyond the 2016 guideline suggestion for 1.2-2.0 g/kg/day.

Evidence Grade: Low

Strength of GRADE recommendation: Weak

Discussion on Clinical Application for Question 2: Few studies have investigated the impact of higher protein doses provided with equivalent energy, thus the impact on outcomes is not known. Until more data are available, we suggest clinicians should individualize protein prescriptions based on clinician judgment of estimated needs.

GUIDELINE QUESTION 3

In adult critically ill patients who are candidates for EN, does similar caloric intake by PN versus EN as the primary feeding modality in the first week of critical illness impact clinical outcomes?

GRADE Recommendation: There was no significant difference in clinical outcomes. Since similar caloric intake provided as PN is not superior to EN and no differences in harm were identified, we recommend that either PN or EN is acceptable.

Evidence grade: High

Strength of GRADE Recommendation: Strong

Discussion on Clinical Application for Question 3: Our findings indicate that when similar energy is delivered by PN or EN early in critical illness for relatively short periods of time, clinical outcomes are similar. Given these data, cost and convenience of providing EN versus PN may be larger determinants of route of feeding early in critical illness than differences in clinical outcomes. The question of PN use arises when EN is not feasible or tolerated or in patients with significant gastrointestinal disease which were not the populations studied for question 3. The two reported trials gave approximately 18-20 kcal/kg/day and 0.6-0.8 g protein/kg/day, and both used a premixed PN solution. Avoidance of energy overfeeding may be the most important decision to make regarding PN use. Optimal glycemic control and catheter care are also important factors in the provision of PN to reduce infectious complications. Clinical judgment about an individual patient's metabolic tolerance to the dextrose (monitor glycemic control), ILE (monitor serum triglyceride concentrations), and amino acid dose is key to delivery of appropriate PN feedings.

Nutrition Support Guidelines:

From Nutrition Support to Pharmacologic Nutrition in the ICU Claude Pichard, Kenneth A. Kudsk, 2002-01-21 Critically ill and critically injured patients require specialized nutrition support to avoid the complications of progressive malnutrition. There is a paucity of information providing practical solutions to these difficult clinical problems. *From Nutrition Support to Pharmacologic Nutrition in the ICU* focuses on the theoretical and practical aspects of the management of this high risk patient population. Each chapter presents a state of the art discussion of nutritional and metabolic issues relevant to this resource intensive patient population and contains current references, liberal tables and figures and the personal insights of recognized international leaders in this field.

Evidence-Based Guidelines for Nutritional Support of the Critically Ill: Results of a Bi-National Guideline Development Conference Gordon S. Doig, 2005-09-01 The purpose of this guidelines initiative was

to develop or update and validate an evidence based feeding guideline for critically ill patients A widely accepted methodology was adopted which requires the identification of previously developed and validated evidence based guidelines The process then specifies a methodology for identifying and assimilating evidence that may be used to change or update the previously validated guidelines An extensive literature search was conducted closeout date April 2003 Four hundred and sixty five full text papers were retrieved and reviewed The only evidence based guideline for feeding critically ill patients that had been validated in an RCT was identified Martin et al 2004 When evaluated in a cluster randomised trial including 499 patients from 14 hospitals the adoption of this guideline resulted in a 10% reduction in mortality p 0 058 and an average decrease in hospital stay of 10 days p 0 003 The process and evidence used to support and update this guideline is presented in this document The final ratified guideline was evaluated in a 27 hospital cluster randomised trial conducted in Australia and New Zealand Nutrition support in adults. Nutrition Support Guidelines Introduction

In the digital age, access to information has become easier than ever before. The ability to download Nutrition Support Guidelines has revolutionized the way we consume written content. Whether you are a student looking for course material, an avid reader searching for your next favorite book, or a professional seeking research papers, the option to download Nutrition Support Guidelines has opened up a world of possibilities. Downloading Nutrition Support Guidelines provides numerous advantages over physical copies of books and documents. Firstly, it is incredibly convenient. Gone are the days of carrying around heavy textbooks or bulky folders filled with papers. With the click of a button, you can gain immediate access to valuable resources on any device. This convenience allows for efficient studying, researching, and reading on the go. Moreover, the cost-effective nature of downloading Nutrition Support Guidelines has democratized knowledge. Traditional books and academic journals can be expensive, making it difficult for individuals with limited financial resources to access information. By offering free PDF downloads, publishers and authors are enabling a wider audience to benefit from their work. This inclusivity promotes equal opportunities for learning and personal growth. There are numerous websites and platforms where individuals can download Nutrition Support Guidelines. These websites range from academic databases offering research papers and journals to online libraries with an expansive collection of books from various genres. Many authors and publishers also upload their work to specific websites, granting readers access to their content without any charge. These platforms not only provide access to existing literature but also serve as an excellent platform for undiscovered authors to share their work with the world. However, it is essential to be cautious while downloading Nutrition Support Guidelines. Some websites may offer pirated or illegally obtained copies of copyrighted material. Engaging in such activities not only violates copyright laws but also undermines the efforts of authors, publishers, and researchers. To ensure ethical downloading, it is advisable to utilize reputable websites that prioritize the legal distribution of content. When downloading Nutrition Support Guidelines, users should also consider the potential security risks associated with online platforms. Malicious actors may exploit vulnerabilities in unprotected websites to distribute malware or steal personal information. To protect themselves, individuals should ensure their devices have reliable antivirus software installed and validate the legitimacy of the websites they are downloading from. In conclusion, the ability to download Nutrition Support

Guidelines has transformed the way we access information. With the convenience, cost-effectiveness, and accessibility it offers, free PDF downloads have become a popular choice for students, researchers, and book lovers worldwide. However, it is crucial to engage in ethical downloading practices and prioritize personal security when utilizing online platforms. By doing so, individuals can make the most of the vast array of free PDF resources available and embark on a journey of continuous learning and intellectual growth.
