Object-Oriented Systems Analysis and Design Joey F. George,2006-10-23 For undergraduate and graduate courses in Systems Analysis Design where an object oriented approach is taken This text focuses on a business rather than a technology perspective As such it emphasizes the mind set of the systems analyst and project manager as opposed to that of the programmer While this text focuses on object oriented systems analysis and design and adheres to UML 2 standards it also contains elements from other approaches such as relational database system design that remain a part of systems development in business organizations today

An Introduction to Object-oriented Systems Analysis and Design with UML and the Unified Process Stephen R. Schach,2004 Overview This text will be the first to present an object oriented methodology from the outset for beginning Systems Analysis and Design students It is the first book to introduce object oriented methods without relying on classical methods to introduce key concepts or without requiring students to know Java or C It will presume no knowledge whatsoever about process modeling or data modeling The widely used UML notation unified modeling language will be used throughout the book for all diagrams and model renderings The key benefit to this approach is that it makes the course easier to teach and learn since many students come to this course with limited backgrounds having only taken one introductory MIS course Also this approach is appealing because object oriented methodology is widely used in industry

OOIS 2001 Xingxu Wang, Shushma Patel, Ronald Johnston, 2012-12-06. Welcome to OOIS 01 and Calgary! This is the 7th International Conference on Object Oriented Information Systems (OOIS) that focus on Object Oriented and Web Based Frameworks for Information Systems. In the last few years we've seen significant new development in this field from one-off design technologies to reusable frameworks and from web applications to bioinformatic systems. We perceive that information processing is one of the most important activities of human beings. Object orientation and frameworks have been the main stream technologies for design and implementation of large scale and complex information systems. Recent research advances and industrial innovations in information systems modeling and Internet applications have explored the new trends in shifting information system vendors from component and system developers to services providers. Users of information systems are increasingly demanding higher performance, mobility, and personalization in order to realize the dream to access and obtain necessary information anywhere and anytime. The new development requires the investigation of new architectures, frameworks, processes, and interconnectivity of information systems at society, organization, team, and personal levels. The OOIS 01 Proceedings has put together a program of 53 papers.
