Personality Capture And Emulation Human Computer Interaction Series:

Personality Capture and Emulation William Sims Bainbridge, 2013-11-12 Personality Capture and Emulation is the gateway to an amazing future that actually may be achieved enabling the preservation and simulation of human personalities at progressively higher levels of fidelity. This challenge is no longer the province merely of uninhibited visionaries but has become a solid field of research drawing upon a wide range of information technologies in human centered computing and cyber human systems. Even at modest levels of accomplishment research in this emerging area requires convergence of cognitive social and cultural sciences in cooperation with information engineering and artificial intelligence thus stimulating new multidisciplinary perspectives. Therefore this book will inspire many specific research and development projects that will produce their own valuable outcomes even as the totality of the work moves us closer to a major revolution in human life. Will it ever really be possible to transfer a human personality at death to a technology that permits continued life? Or will people come to see themselves as elements in a larger socio cultural system for which a societal information system can provide collective immortality even after the demise of individuals? A large number and variety of pilot studies and programming projects are offered as prototypes for research that innovators in many fields may exploit for the achievement of their own goals. Together they provide an empirical basis to strengthen the intellectual quality of several current debates at the frontiers of the human and information sciences.

Handbook on 3D3C Platforms Yesha Sivan, 2015-11-04 This book presents 3D3C platforms three dimensional systems for community creation and commerce. It discusses tools including bots in social networks, team creativity, privacy and virtual currencies, micropayments as well as their applications in areas like healthcare, energy, collaboration and art. More than 20 authors from 10 countries share their experiences, research findings and perspectives offering a comprehensive resource on the emerging field of 3D3C worlds. The book is designed for both the novice and the expert as a way to unleash the emerging opportunities in 3D3C worlds. This Handbook maps with breadth and insight the exciting frontier of building virtual worlds with digital technologies. David Perkins, Research Professor, Harvard Graduate School of Education. This book is from one of the most adventurous and energetic persons I have ever met. Yesha takes us into new undiscovered spaces and provides insight into phenomena of social interaction and immersive experiences that transform our lives. Cees de Bont, Dean of School of Design, Chair Professor of Design, School of Design of the Hong Kong Polytechnic University. When you read 3D3C Platforms you realize what a domain like ours 3D printing can and should do for the world. Clearly we are just starting. Inspiring David Reis, CEO, Stratasys Ltd. This book provides a stunning overview regarding how virtual worlds are reshaping possibilities for identity and community. The range of topics addressed by the authors from privacy and taxation to fashion and health care provide a powerful roadmap for addressing the emerging potential of these online environments. Tom Boellstorff, Professor, Department of Anthropology, University of California, Irvine. Handbook on 3D3C Platforms amassed a unique collection of multidisciplinary academic thinking. A primer on innovations.

Affect and Emotion in Human-Computer Interaction Christian Peter, Russell Beale, 2008-08-25 Affect and emotion play an important role in our everyday lives. They are present whatever we do wherever we are and wherever we go without us being aware of them for much of the time. When it comes to interaction be it with humans, technology or humans via technology we suddenly become more aware of emotion either by seeing the other's emotional expression or by not getting an emotional response while anticipating one. Given this it seems only sensible to explore affect and emotion in human computer interaction to investigate the underlying principles to study the role they play to develop methods to quantify them and to finally build applications that make use of them. This is the research field for which over ten years ago Rosalind Picard coined the phrase affective computing. The present book provides an account of the latest work on a variety of aspects related to affect and emotion in human technology interaction. It covers theoretical issues, user experience and design aspects as well as sensing issues and reports on a number of affective applications that have been developed in recent years.

Civilizations Beyond Earth Douglas A. Vakoch, Albert A. Harrison, 2011-09-01 Astronomers around the world are pointing their telescopes toward the heavens searching for signs of intelligent life. If they make contact with an advanced alien civilization how will humankind respond? In thinking about first contact the contributors to this volume present new empirical and theoretical research on the societal dimensions of the Search for Extraterrestrial Intelligence (SETI). Archaeologists and astronomers explore the likelihood that extraterrestrial intelligence exists using scientific insights to estimate such elusive factors as the longevity of technological societies. Sociologists present the latest findings of novel surveys tapping into the public's attitudes about life beyond Earth to show how religion and education influence beliefs about extraterrestrials. Scholars from such diverse disciplines as mathematics, chemistry, journalism and religious studies offer innovative solutions for bridging the cultural gap between human and extraterrestrial civilizations while recognizing the tremendous challenges of communicating at interstellar distances. At a time when new planets are being discovered around other stars at an unprecedented rate this collection provides a much needed guide to the human impact of discovering we are not alone in the universe.

The Engineering Index Annual, 1988 Since its creation in 1884 Engineering Index has covered virtually every major engineering innovation from around the world. It serves as the historical record of virtually every major engineering innovation of the 20th century. Recent content is a vital resource for current awareness, new production information, technological forecasting and competitive intelligence. The world's most comprehensive interdisciplinary engineering database, Engineering Index, contains over 10.7 million records. Each year over 500,000 new abstracts are added from over 5,000 scholarly journals, trade magazines and conference proceedings. Coverage spans over 175 engineering disciplines from over 80 countries. Updated weekly.
