Translational Perspectives in Auditory Neuroscience Kelly L. Tremblay, Robert F. Burkard, 2012-06-29 **Springer Handbook of Auditory Research**, 1992 **What we learn and when we learn it: sensitive periods in development**

Etienne De Villers-Sidani, Virginia Penhune, 2014-11-21 The impact of training or experience is not the same at all points in development Children who receive music lessons or learn a second language before age 7 8 are more proficient as adults Early exposure to drugs or trauma makes people more likely to become addicted or depressed later life Rat pups exposed to specific frequencies from 9 13 days post partum show expanded cortical representations of these frequencies Young birds must hear and copy their native song within 1 2 months of birth or they may never learn it at all These are examples of sensitive periods developmental windows where maturation and specific experience interact to produce differential long term effects on the brain and behavior While still controversial evidence for the existence of sensitive periods has grown as has our understanding of the underlying mechanisms of brain plasticity Behavioral evidence from studies of language psychopathology or vision in humans has been complemented by evidence elucidating molecular gene and hormonal mechanisms in animals It has been proposed that sensitive periods can be both opened and closed by specific experience and that there are multiple overlapping sensitive periods that occur through out development as functions come on line It is also likely that experience dependent behavioral or brain plasticity accrued during one sensitive period can serve as a scaffold on which later experience and plasticity can build Based on current knowledge there are a number of broad questions and challenges to be addressed in this domain these include generating new information about the neurobiological mediators of structural and functional changes proposing models of brain development that will better predict when sensitive periods should occur and what functions are implicated investigation of the interaction between experience during a sensitive period and pre existing individual differences and the relationship between experience during a sensitive period and on going experience The goal of this Research Topic is to bring together scientists in different fields whose work addresses these issues including animal and human developmental neuroscience language and cognitive development education developmental psychopathology and sensory neuroscience

National Library of Medicine Current Catalog National Library of Medicine (U.S.),1993 *Hearing Aids* Gerald R. Popelka,Brian C. J. Moore,Richard R. Fay,Arthur N. Popper,2016-09-26 This volume will serve as the first Handbook of its kind in the area of hearing aid research often the least defined least understood part of the multi disciplinary research process Most scientific training is very advanced within the particular disciplines but provides little opportunity for systematic introduction to the issues and obstacles that prevent effective hearing aid related research This area has emerged as one of critical importance as signified by a single specialized meeting the International Hearing Aid Conference IHCON that brings together specialists from the disparate disciplines involved including both university and industry researchers Identification of the key steps that enable high impact basic science to ultimately result in significant clinical advances that improve patient outcome is critical This volume will provide an overview of current key issues in hearing aid research from the perspective of many different disciplines not only from the perspective of the key funding agencies but also from the scientists and clinicians who are currently involved in hearing aid research It will offer insight into the experience current technology and future technology that can help improve hearing aids as scientists and clinicians typically have little or no formal training over the whole range of the individual disciplines that are relevant The selection and coverage of topics insures that it will have lasting impact well beyond immediate short term or parochial concerns
