Introduction: In the area of environmental psychology, time- and the temporal perspective have often been used as an overarching framework to explain or predict environmental outcomes. This study aims to introduce a new Time Importance Scale (TIS) based on the attitude strength theory and to assess its nomological validity in comparison with the more established Temporal Focus Scale (TFS) in the context of consumers' willingness to pay more for environmentally friendly products. The new TIS scale is short and simple to manage.

Method: The study proposes competing plausible structural models testing alternative relationships between future time perspective (FTP) and environmental values using a nationwide representative survey sample of 1633 Norwegians.

Results: The results confirm the convergent and discriminant validity of the new TIS scale. However, the direct association between the TIS scale and willingness to pay for environmentally friendly products is weak or non-significant depending on the alternative models used to validate the nomological validity.

Discussion: The new TIS scale provides evidence of a possible causal chain: FTP → environmental values → willingness to pay, with strong associations between the present TIS and hedonic values and between the future TIS and biospheric values. Environmental values are activated by FTP. In most cases, the new TIS outperforms the established TFS in nomological validity. Future research should validate our findings in experimental trials to demonstrate more substantial causal relationships.

Introduction

The relationship between individuals' time perspective (TP) and their pro-environmental behavior is highly relevant to researchers and practitioners when designing strategies to raise the public understanding of and concern about issues such as climate change (Milner et al., 2012; Milner et al., 2021). Significant research nowadays focuses in particular on individuals' attention to the future dimension of the time perspective (FTP; Koelj et al., 2014) and the

Perspectives On Time Perspectives On Time:

Time Perspective Aleksandra Kostić, Derek Chadee, 2017-11-29 This book focusses on the theory and application of time perspective theory. Time perspective can be an important factor in determining psychological well being and the way we see our world and others around us. The unique contemporary nature of this theory's evolution has spurred great interest over the last 20 years. The editors responded to this interest by bringing together contributors across a multitude of subjects and perspectives to facilitate an unprecedented discussion on the topic covering areas such as financial health, psychotherapy across adulthood and old age, prenatal past metacognition, community and change, fear of crime and intrinsic motivations. The interdisciplinary nature of this project makes it of interest to a wide cross section of academics and practitioners including psychologists, social workers, criminologists and anyone who has or wishes to adopt time perspective theorization to assist them in their understanding.

Time Perspective Theory: Review, Research and Application Maciej Stolarski, Nicolas Fieulaine, Wessel van Beek, 2014-11-05 This book is about time and its powerful influence on our personal and collective daily life. It presents the most comprehensive and up to date overview of contemporary knowledge on temporal psychology inspired by Zimbardo's work on Time Perspective (TP). With contributions from renowned and promising researchers from all over the globe and at the interface of social, personality, cognitive and clinical psychology, the handbook captures the breadth and depth of the field of psychological time. Time perspective as the way people construe the past, the present and the future is conceived and presented not only as one of the most influential dimensions in our psychological life, leading to self-impairing behaviors but also as a facet of our person that can be de-biased and supportive for well-being and happiness. Written in honor of Philip G. Zimbardo on his 80th birthday and in acknowledgement of his leading role in the field, the book contains illustrations of the countless studies and applications that his theory has stimulated and captures the theoretical, methodological and practical pathways he opened by his prolific research.

The core elements of Society 5.0 include problem solving and value creation, interdisciplinary skills, diverse opportunities, resilience, and environmental harmony. This concept also highlights the United Nations' 17 Sustainable Development Goals (SDGs) which all individuals and organizations need to face. The promotion of the SDGs from a psychological perspective is believed to be beneficial and aligns with the intention of the United Nations. Sustainable Development Goals (SDGs) can be examined from a microscopic level to understand individuals' mental processes and attitudes toward them. Investigating the relationships between the SDGs and social and positive psychology can benefit
