Computational Models for CO2 Geo-sequestration & Compressed Air Energy Storage Rafid Al-Khoury, Jochen Bundschuh, 2014-04-17 A comprehensive mathematical and computational modeling of CO2 Geosequestration and Compressed Air Energy Storage Energy and environment are two interrelated issues of great concern to modern civilization As the world population will soon reach eight billion the demand for energy will dramatically increase intensifying the use of fossil fuels Ut *Quantifying Uncertainty in Subsurface Systems* Céline Scheidt, Lewis Li, Jef Caers, 2018-06-19 Under the Earth's surface is a rich array of geological resources many with potential use to humankind However extracting and harnessing them comes with enormous uncertainties high costs and considerable risks The valuation of subsurface resources involves assessing discordant factors to produce a decision model that is functional and sustainable This volume provides real world examples relating to oilfields geothermal systems contaminated sites and aquifer recharge Volume highlights include A multi disciplinary treatment of uncertainty quantification Case studies with actual data that will appeal to methodology developers A Bayesian evidential learning framework that reduces computation and modeling time Quantifying Uncertainty in Subsurface Systems is a multidisciplinary volume that brings together five major fields information science decision science geosciences data science and computer science It will appeal to both students and practitioners and be a valuable resource for geoscientists engineers and applied mathematicians Read the Editors Vox eos org editors vox quantifying uncertainty about earths resources **Oilfield Review**, 2009 Advances in the Study of Fractured Reservoirs G.H. Spence, J. Redfern, R. Aguilera, T.G. Bevan, J.W. Cosgrove, G.D. Couples, J.-M. Daniel, 2014-08-27 Naturally fractured reservoirs constitute a substantial percentage of remaining hydrocarbon resources they create exploration targets in otherwise impermeable rocks including under explored crystalline basement and they can be used as geological stores for anthropogenic carbon dioxide Their complex behaviour during production has traditionally proved difficult to predict causing a large degree of uncertainty in reservoir development The applied study of naturally fractured reservoirs seeks to constrain this uncertainty by developing new understanding and is necessarily a broad integrated interdisciplinary topic This book addresses some of the challenges and advances in knowledge approaches concepts and methods used to characterize the interplay of rock matrix and fracture networks relevant to fluid flow and hydrocarbon recovery Topics include describing characterizing and identifying controls on fracture networks from outcrops cores geophysical data digital and numerical models geomechanical influences on reservoir behaviour numerical modelling and simulation of fluid flow and case studies of the exploration and development of carbonate siliciclastic and metamorphic naturally fractured reservoirs

permeabilities of 0 001 1 10 3 m<sup>2</sup> The basic types include tight sandstone mud shale tight carbonate etc Unconventional oil and gas resources are very rich and it is necessary to conduct in depth research on provenance analysis sediment transport reservoir evaluation and geo energy The purpose of this Research Topic is to provide operational evaluation ideas for unconventional resource prediction through the study of unconventional reservoir provenance analysis sediment transport reservoir evaluation and geo energy and ultimately serve oil and gas exploration practice The different provenance controls the distribution of sedimentary facies in the vertical and lateral directions which in turn control the spatial distribution of the grain size and clastic composition The study of provenance analysis and sediment transport can integrate tectonics climate provenance lithotypes transport dynamics and burial diagenesis which can provide a comprehensive understanding of unconventional reservoirs The modelling of unconventional reservoirs is mainly aimed at reservoirs with original reservoirs tight and generally no natural industrial output requiring artificial reconstruction a large number of horizontal wells or branch wells and other targeted mining technologies to improve productivity The modeling of unconventional reservoir mainly uses horizontal well data Different from conventional reservoir modeling the modelling of unconventional reservoir involves sweet spot characterization and artificial fracture establishment This Research Topic will focus on provenance analysis sediment transport reservoir evaluation and geo energy of unconventional reservoirs It will be primarily devoted to research papers and review papers Pioneering research papers in the field of experimental and numerical simulation are encouraged to submit their work The scope includes but are not limited to Provenance lithotype and sediment transport pathways Diagenesis and reservoir quality Diagenesis numerical simulation and seismic diagenetic facies Data processing and application Implication of machine learning and artificial intelligence to trace sediment transport Controlling effect of provenance on ore bearing reservoirs and deposits Formation mechanism of sedimentary type deposits iron uranium bauxite etc
