### **Nursing Ethics In Everyday Practice**

Ethical conflicts are a part of everyday practice in nursing care. Nurses, as the most trusted profession, strive to provide holistic care. Whether in the clinical setting or research focus, ethical decision-making challenges nurses to decide among personal values, emotional response, and principles set forth by professional guidelines. Ulrich describes multiple occasions when nurses speak for the rights of persons throughout the lifespan. Her expertise is notable as it stems from her academic experiences in nursing and medicine.

*Nursing Ethics in Everyday Practice* is a compilation of thirteen chapters each generating thought provoking statements to consider as one studies the case presentations in tandem with supporting discussions. One might think that ethical codes provide a pathway to resolve a situation, however clarity during a situation becomes complicated when searching for truth compared to loyalty, goal setting, individuals or community and mercy as opposed to justice. Several frameworks endeavor to address mental health and competency and how to objectively examine a given case providing the necessary measures necessary to apply a model satisfactorily. Reflection is essential to understand who you are, who you want to be and what values define you in order to be successful in applying ethics in practice.

Ulrich outlines environmental complexities of patients' rights and presents challenges to the decision-making process; she provides systematic approaches to construct realistic action plans. Each step is a tool that affords a reflective stance on personal communication and development of competency.

*Nursing Ethics in Everyday Practice* provides profound insight pertaining to ethical consultation. Throughout this chapter are multiple supporting agencies, namely The Joint Commission and the American Nurses Credentialing Center that recognize the implications and rights for health care. Taking this a step further is the Clinical Ethics Credential Project developed by the American Society for Bioethics and

Leslie Gelling BSc Hons MA RGN Research Nurse Department of Neurosurgery University of Cambridge UK. The text is an admirable feat in the difficult task of combining theory and practice. David Seedhouse has worked them into a seamless, coherent whole which culminates in a practical code of ethics for nurses. Leila Shotton RN PhD Lecturer in Nursing Ethics University of Tasmania Australia. The reader is helped in a clear and direct way using philosophical analysis to understand the concepts that underpin practice. Kevin J Power MA BA Hons RSCN RGN DipN Cert ED Senior Lecturer School of Nursing and Midwifery De Montfort University Leicester UK. This book bold in scope represents a return to the pursuit of comprehensive nursing theory. Douglas Olsen RN PhD Yale University USA. Nursing ideals and analytical philosophy rarely overlap. As a result existing nursing codes fail to define key terms clearly enough to enable nurses to apply them. David Seedhouse tackles this problem by looking at nine key concepts, explains their meaning and shows how they can be applied in everyday situations. The result is a precise yet compassionate framework which enables nurses to reflect deeply about the importance of their work and can support them as they strive to make ethically sound decisions. Provides a practical approach to traditionally intangible health care issues. Includes an array of accessible case studies and diagrams.
